Although the word gliderman does not appear in the dictionary, a brave group of World War II soldiers known as glidermen flew into combat inside unarmed and unarmored canvas-covered gliders known as "flying coffins." Charles J. Masters points out that because World War II was the first truly mechanized and armored global conflict, the role of the glidermen and their combat gliders was at best anachronistic. Fighter planes exceeded speeds of 400 miles per hour and were heavily armed with multiple machine guns. Dogfights had taken on new dimensions, eclipsing the tactics, speed, and firepower first evidenced by the fragile biplanes of World War I. Tanks achieved a lethal efficiency barely dreamed of even five years before the war. An array of weaponry never seen in any previous military engagement confronted the combat soldier during World War II. And yet there were gliders. And glidermen. Masters tells of these men and of their fragile aircraft in a war of mechanized chaos. In copious detail, he describes

the gliders and the Americans who boarded them during the American D-Day glider attack, a mission that was part of the overall cross-channel plan code-named "Operation Neptune." The son of a gliderman with the 82nd Airborne Division, Masters had unique access to the surviving glidermen and comrades of his father. During the course of his research, he located and interviewed 106 of the men who had flown the D-Day mission in gliders. As an insider—in a sense almost a member of the family and fraternity of glider-men—Masters was cordially received by the members of the American airborne divisions that participated in D-Day, many of whom told him stories they had seldom told their own friends and families. Often harrowing and always riveting, the stories these men told an eager listener and researcher are very much a part of this narrative. Masters has also assembled the finest existing collection of photographs of the American D-Day glider attack. These photographs—many of which have never before been published—provide a spectacular photographic record of a little-known aspect of this war. In fact, because of the short military history of the American combat glider, most readers, including veterans of World War II, will not have seen one of these "flying coffins," even at a distance. These photographs afford the opportunity to actually examine the inside of the combat gliders used on D-Day, to observe the glidermen in action, and to witness the often tragic consequences of the glider attack. How does a troubled boy from California would come to be one of the world's most renowned aviators? How does a group of brothers who were high school dropouts go from New Hampshire go on to build some of the most advanced aircraft of the time? How do these men become forever linked to one of the greatest air races in history? This is the story of Jimmy Doolittle, the Granville Brothers, and the amazing Gee Bee R-1 Racer. The Action Plan for Australian Mammals 2012 is the first review to assess the conservation status of all Australian mammals. It complements The Action Plan for Australian Birds 2010 (Garnett et al. 2011, CSIRO Publishing), and although the number of Australian mammal taxa is marginally fewer than for birds, the proportion of endemic, extinct and threatened mammal taxa is far greater. These authoritative reviews represent an important foundation for understanding the current status, fate and future of the nature of Australia. This book considers all species and subspecies of Australian mammals, including those of external territories and territorial seas. For all the mammal taxa (about 300 species and subspecies) considered Extinct, Threatened, Near Threatened or Data Deficient, the size and trend of their population is presented along with information on geographic range and trend, and relevant biological and ecological data. The book also presents the current conservation status of each taxon under Australian legislation, what additional information is

needed for managers, and the required management actions. Recovery plans, where they exist, are evaluated. The voluntary participation of more than 200 mammal experts has ensured that the conservation status and information are as accurate as possible, and allowed considerable unpublished data to be included. All accounts include maps based on the latest data from Australian state and territory agencies, from published scientific literature and other sources. The Action Plan concludes that 29 Australian mammal species have become extinct and 63 species are threatened and require urgent conservation action. However, it also shows that, where guided by sound knowledge, management capability and resourcing, and longer-term commitment, there have been some notable conservation success stories, and the conservation status of some species has greatly improved over the past few decades. The Action Plan for Australian Mammals 2012 makes a major contribution to the conservation of a wonderful legacy that is a significant part of Australia's heritage. For such a legacy to endure, our society must be more aware of and empathetic with our distinctively Australian environment, and particularly its marvellous mammal fauna; relevant information must be readily accessible; environmental policy and law must be based on sound evidence; those with responsibility for environmental management must be aware of what priority actions they should take; the urgency for action (and consequences of inaction) must be clear; and the opportunity for hope and success must be recognised. It is in this spirit that this account is offered.

Design, build, test, and fly your own glider while learning the fundamentals of flight and how aircraft are created. A Badger Tale: Adventures of a Wisconsin Farm Family Tom Foxwell and his family endure and, some would say, triumph over one hundred years of farming, romance, mystery, and adventure. A Badger Tale is a heartwarming saga of grandfather, son, and grandson and the trials and tribulations of growing up on a Wisconsin farm. The Foxwell family encounters the Great Depression, the Chicago Worlds Fair, World War II, rationing, the Cold War, Korea, and much, much more. This is a story of love, loss, death, and triumph that will hold you in its grasp until the very end.
