Excerpt from Free Hand Drawing and Designing One of the greatest requirements of the modern engineer is to be able to make rapid neat sketches freehand, i. e. without the use of any drafting instruments, but simply by employing a well sharpened soft pencil and an eraser. There are many cases in the daily practice of every engineer from the lowest to the highest ranks, when they are called upon to make a free-hand sketch of a job, and in some cases this rough sketch remains later

the only available record of the condition of the job before any changes took place. It is therefore important to have such sketches done as neatly and accurately as possible so that they would convey the correct idea to the draftsman or to the man who is to carry out the particular work represented by such sketches. There are two principal kinds of sketches employed in describing engineering work: the actual picture of the job, as it appears to the eye; and the orthographic projection of the object in the three principal planes, but drawn roughly without the aid of instruments and not to correct scale. We will endeavor in the following chapters to cover the principles of both types of sketching, beginning with the simplest objects first and then leading up to the free-hand drawing of more or less complicated parts of machinery. Introduction to Art Therapy: Sources and Resources, is the thoroughly updated and revised second edition of Judith Rubin's landmark 1999 text, the first to describe the history of art in both assessment and therapy, and to clarify the differences between artists or teachers who provide "therapeutic" art activities, psychologists or social workers who request drawings, and those who are trained as art therapists to do a kind of work which is similar, but qualitatively different. This new edition contains downloadable resources with over 400 still images and 250 edited video clips for much richer illustration than is possible with figures alone; an additional chapter describing the work that art therapists do; and new material on education with updated information on standards, ethics, and informing others. To further make the information accessible to practitioners, students, and teachers, the author has included a section on treatment planning and evaluation, an updated list of resources — selected professional associations and proceedings — references, expanded citations, and clinical vignettes and illustrations. Three key chapters describe and expand the work that art therapists do: "People We Help," deals with all ages; "Problems We Treat," focuses on different disorders and disabilities; and "Places We Practice," reflects the expansion of art therapy beyond its original home in psychiatry. The author's own introduction to the therapeutic power of art — as a person, a worker, and a parent — will resonate with both experienced and novice readers alike. Most importantly, however, this book provides a definition of art therapy that contains its history, diversity, challenges, and accomplishments. DRAWING is the expression of an idea: "Art must come from within, and not from without. This fact has led some to assert that the study of nature is not essential to the student, and that careful training in the study of the representation of the actual appearance is mechanical and harmful. Such persons forget that all art ideas and sentiments must be based upon natural objects, and that a person who cannot represent truly what he sees will be entirely unable to express the simplest ideal conceptions so that others may appreciate them. Study of nature is, then, of the first and greatest importance to the art student. A drawing may be made in outline, in light and shade, or in color. The value of the drawing artistically does not depend upon the medium used, but upon the individuality of the draughtsman making it. The simplest pencil sketch may have much more merit than an elaborate colored drawing made by one who is unable to represent truly the facts of nature, or who sees, instead of the beauty and poetry, the ugliness and the imperfections of the subject. OBJECTS FOR STUDY: We hear a great deal now about the cultivation of the sense of beauty by the choice of drawing models. Many go so far as to say that nothing but the most beautiful forms should be given from the start, and, asserting that the cube, cylinder, and other type forms are not beautiful, they say that they should not be used, but that beautiful variations of these type forms should be provided. More definite information than this is rarely given. We are not told what natural objects are beautiful, and cheap enough to be provided, or how these objects of beauty are to be obtained, if they are not provided by the city. Such advice as to the use of beautiful models must be very pleasant and valuable to the drawing teacher, who so often fails to secure the money necessary to provide the cheap wooden models costing a few cents each; and we do not wonder that special and regular teachers often regard this subject as one having no standards and no authorities. Much of all this commotion about beautiful objects of study is raised by those who, suffering from criticism, have in the desire to escape it plunged headlong from one set of mechanical rules for a series of lessons for the public schools, to another set less arbitrary in certain directions, but still mechanical, and if possible, more harmful than before, because attempting more. The average teacher can readily learn to discover at a glance whether or not the drawing of a cube represents the object as it might appear. She can do this even without seeing the model from the pupil's position; and the student can compare his drawing with the object and discover its errors more easily than he can in the drawing of a cast, a leaf, a figure, or any other object of beauty, in which the beauty depends upon lines which are subtle and

which require a trained eye to see at all truly. This blank sketch pad has over 100 large (8.5 inches by 11.0 inches) high quality blank sheets of paper that can be used for pencil drawing. Rowe created her first works as a child in rural Fayetteville, Georgia, but only found the time and space to reclaim her artistic practice in the late 1960s, following the deaths of her second husband and her longtime employer. This book offers an unprecedented view of how Rowe cultivated her drawing practice late in life, starting with colorful and at times simple sketches on found materials and moving toward her most celebrated, highly complex compositions on paper. Through photographs and reconstructions of her Playhouse created for an experimental documentary on her life, this publication is also the first to juxtapose her drawings with her art environment. Nellie Mae Rowe (1900-82) grew up in rural Fayetteville, Georgia. When her Playhouse became an Atlanta attraction, she began to exhibit her art outside of her home, beginning with Missing Pieces: Georgia Folk Art, 1770-1976, a traveling exhibition that brought attention to several Southern self-taught artists, including Rowe and Howard Finster. In 1982, the year she died, Rowe's work received a new level of acclaim, as she was honored in a solo exhibition at Spelman College and included as one of three women artists in the Corcoran Gallery of Art's landmark exhibition .
