This volume represents the culmination of an extensive research project that studied the development of linguistic form/function relations in narrative discourse. It is unique in the extent of data which it analyzes--more than 250 texts from children and adults speaking five different languages--and in its crosslinguistic, typological focus. It is the first book to address the issue of how the structural properties and rhetorical preferences of different native languages--English, German, Spanish, Hebrew, and Turkish--impinge on narrative abilities across different phases of development. The work of Berman and Slobin and their colleagues provides insight into the interplay between shared, possibly universal, patterns in the developing ability to create well-constructed, globally organized narratives among preschoolers from three years of age compared with school children and adults, contrasted against the impact of typological and rhetorical features of particular native languages on how speakers express these abilities in the process of "relating events in narrative." This volume also makes a special contribution to the field of language acquisition and development by providing detailed analyses of how linguistic forms come to be used in the service of narrative functions, such as the expression of temporal relations of simultaneity and retrospection, perspective-taking on events, and textual connectivity. To present this information, the authors prepared in-depth analyses of a wide range of linguistic systems, including tense-aspect marking, passive and middle voice, locative and directional predications, connectivity markers, null subjects, and relative clause constructions. In contrast to most work in the field of language acquisition, this book focuses on developments in the use of these early forms in extended discourse--beyond the initial phase of early language development. This dictionary is the ideal supplement to the German/English Dictionary of Idioms, which together give a rich source of material for the translator from and into each language. The dictionary contains 15,000 headwords, each entry supplying the German equivalents, variants, contexts and the degree

of currency/rarity of the idiomatic expression. This dictionary will be an invaluable resource for students and professional literary translators. Not for sale in Germany, Austria or Switzerland In this final volume in the series, the contributors attempt to "expand the contexts" in which child language has been examined crosslinguistically. The chapters build on themes that have been touched on, anticipated, and promised in earlier volumes in the series. The study of child language has been situated in the disciplines of psychology and linguistics, and has been most responsive to dominant issues in those fields such as nativism and learning, comprehension and production, errors, input, and universals of morphology and syntax. The context has primarily been that of the individual child, interacting with a parent, and deciphering the linguistic code. The code has been generally treated in these volumes as a system of morphology and syntax, with little attention to phonology and prosody. Attention has been paid occasionally to the facts that the child is acquiring language in a sociocultural setting and that language is used in contexts of semantic and pragmatic communication. In addition, there has been a degree of attention paid to the interactions between language and cognition in the process of development. As for individual differences between children, they have been discussed in those studies where they could not be avoided, but such variation has rarely been the focus of systematic attention. Differences between individual languages have been of great interest, but these differences have not often been placed in a framework of systematic typological variation. And although languages and their grammars change over time, the focus of attention on the individual child learner has generally led to neglect of explanatory principles that are best found on the level of linguistic diachrony, rather than the level of innate ideas or patterns of learning and cognition in the individual child. The chapter authors seek to explore these neglected contexts in more depth. This volume has arisen from the 26th International LAUD Symposium on "Humboldt and Whorf Revisited. Universal and Culture-Specific Conceptualizations in Grammar and Lexis." While contrasting two or more languages, the papers in this volume either provide empirical evidence confirming hypotheses related to linguistic relativity, or deal with methodological issues of empirical research. These new approaches to Whorf's hypotheses do not focus on mere theorizing but provide more and more empirical evidence gathered over the last years. They prove in a very sophisticated way that Whorf's

ideas were very lucid ones, even if Whorf's insights were framed in a terminology which lacked the flexibility of linguistic categories developed over the last quarter of this century, especially in cognitive linguistics. To date, there is sufficient proof to claim that linguistic relativity is indeed a vital issue, and the current volume confirms a more general trend for rehabilitating Whorf's theory complex and also offers evidence for it. It contains articles written by scholars from various fields of linguistics including phonology, psycholinguistics, language acquisition, historical linguistics, anthropological linguistics and (cross-)cultural semantics, which all contribute to a re-evaluation and partial reformulation of Whorf's thinking.

A translation with revisions of *Omgangsvormen in het Homerische epos*, originally presented as the author's thesis, Utrecht, 1975. Reprint of the original, first published in 1873. The publishing house Anatiposi publishes historical books as reprints. Due to their age, these books may have missing pages or inferior quality. Our aim is to preserve these books and make them available to the public so that they do not get lost.

Children who grow up as second- or third-generation immigrants typically acquire and speak the minority language at home and the majority language at school. Recurrently, these children have been the subject of controversial debates about their linguistic abilities in relation to their educational success. However, such debates fail to recognise that variation in bilinguals' language processing is a phenomenon in its own right that results from the dynamic influence of one language on another. This volume provides insight into cross-linguistic influence in Turkish-German and Turkish-French bilingual children and uncovers the nature of variation in L1 and L2 oral motion event descriptions by evaluating the impact of language-specific patterns and language dominance. The results indicate that next to typological differences between the speakers' L1 and L2, language dominance has an impact on the type and direction of influence. However, the author argues that most variation can be explained by L1/L2 usage preferences. Bilinguals make frequent use of patterns that exist in both languages, but are unequally preferred by monolingual speakers. This finding underlines the importance of usage-based approaches in SLA. This volume represents the culmination of an extensive research project that studied the development of linguistic form/function relations in narrative discourse. It is unique in the extent of data which it analyzes--more than 250 texts from children and adults speaking five different languages--and in

its crosslinguistic, typological focus. It is the first book to address the issue of how the structural properties and rhetorical preferences of different native languages--English, German, Spanish, Hebrew, and Turkish--impinge on narrative abilities across different phases of development. The work of Berman and Slobin and their colleagues provides insight into the interplay between shared, possibly universal, patterns in the developing ability to create well-constructed, globally organized narratives among preschoolers from three years of age compared with school children and adults, contrasted against the impact of typological and rhetorical features of particular native languages on how speakers express these abilities in the process of "relating events in narrative." This volume also makes a special contribution to the field of language acquisition and development by providing detailed analyses of how linguistic forms come to be used in the service of narrative functions, such as the expression of temporal relations of simultaneity and retrospection, perspective-taking on events, and textual connectivity. To present this information, the authors prepared in-depth analyses of a wide range of linguistic systems, including tense-aspect marking, passive and middle voice, locative and directional predications, connectivity markers, null subjects, and relative clause constructions. In contrast to most work in the field of language acquisition, this book focuses on developments in the use of these early forms in extended discourse--beyond the initial phase of early language development. The book offers a pioneering approach to the interactions between form and function in the development and use of language, from a typological linguistic perspective. The study is based on a large crosslinguistic corpus of narratives, elicited from preschool, school-age, and adult subjects. All of the narratives were elicited by the same picture storybook, *Frog, Where Are You?*, by Mercer Mayer. (An appendix lists related studies using the same storybook in 50 languages.) The findings illuminate both universal and language-specific patterns of development, providing new insights into questions of language and thought. This volume examines subordinate *wh*-clauses that lack an interrogative interpretation, particularly those in which the *wh*-word seems to deviate from its literal meaning. These include subordinate manner *wh*-clauses that have a declarative-like meaning, locative *wh*-clauses expressing kinds, and headed relatives that serve as recognitional cues, among many others. While regular interrogative embedding has been widely studied in recent years, little is known about

the circumstances under which non-interrogative (subordinate) wh-clauses are licensed, nor why some, but not all, wh-phrases can be polyfunctional. The chapters in the book combine the study of cross-linguistic variation in patterns of subordination with formal semantic and syntactic analyses, with data drawn from a wide range of languages including Basque, Czech, English, Mandarin, Romanian, and Taiwan Southern Min. They provide novel insights into the ways in which wh-phrases can be used to introduce complements, relative clauses, and adverbial clauses, and show how the meanings associated with wh-words are exploited beyond their standard distribution. The findings have implications for our understanding of both the phenomenon of subordination as a whole and the relationship between form and meaning in wh-clauses.

Sociologist Vree peers into the primordial obscurity before Robert's Rules and traces the evolution of behavior during councils, assemblies, parliaments, and conferences to the present within the framework of Norbert Elias' theory of civilizing processes. Rather than a comparative history, he presents a succession of case studies such as the militarization and demilitarization of meetings in agrarian societies, the emergence of a Protestant meeting order, and the professionalization of meeting manners. This volume is a collection of articles which present the results of investigations into the grammar, semantics and pragmatics of deictic expressions in several languages. Special emphasis is placed on contrastive studies that take cognitive and cultural context into account. Both the empirical and theoretical studies focus on the ways in which spatial, temporal, personal and textual entities are conceptualised and referred to. The cognitive approach proves to be a promising perspective combining aspects of perception, reasoning and linguistic expression to reveal what seems to be at the very heart of deictics. This is an OCR edition without illustrations or index. It may have numerous typos or missing text. However, purchasers can download a free scanned copy of the original rare book from the publisher's website (GeneralBooksClub.com). You can also preview excerpts of the book there. Purchasers are also entitled to a free trial membership in the General Books Club where they can select from more than a million books without charge. Volume: 1; Original Published by: Philadelphia: S.P. Town in 1875 in 94 pages; Subjects: Physicians; Biography This edited volume showcases new work on discourse analysis by big names in the field and promising early-career researchers. Arising from the latest in the series of IWoDA workshops in Santiago de

Compostela, it provides novel insights into both the explicit and the implicit characteristics of discourse as used in verbal interaction. Discourse markers, as their name indicates, are among the explicit signals of coherence, while discourse relations may be either explicit or implicit. Similarly, the discourse used for purposes of evaluation, stance-taking and interpersonal engagement is either overt or covert, as is also true of the expression of emotions and empathy. This, in general terms, is the challenging terrain into which the contributors to this volume have ventured. The book combines theoretical issues with a practical orientation, comparing languages, analysing different registers, studying the openings of Skype conversations, and much more besides; it will prove highly relevant for postgraduate and advanced practitioners of discourse analysis, interaction studies, semantics and pragmatics. These collected essays contain fundamental contributions to contemporary cultural analysis and theory as well as exemplary interpretations of film, literature and other media. Central issues of current cultural studies are addressed: cultural narratives, cultural identity, collective memory and post-colonial thinking. The oeuvre of cultural and literary critic Wolfgang Müller-Funk encompasses historic analyses such as readings of Broch, Canetti and Musil, and the heritage they passed on. Other essays move from the beginning of the 20th to the 21st century and address questions of space, time and globalization discussing, for example, Walter Benjamin and 9/11. Language acquisition is a human endeavor par excellence. As children, all human beings learn to understand and speak at least one language: their mother tongue. It is a process that seems to take place without any obvious effort. Second language learning, particularly among adults, causes more difficulty. The purpose of this series is to compile a collection of high-quality monographs on language acquisition. The series serves the needs of everyone who wants to know more about the problem of language acquisition in general and/or about language acquisition in specific contexts.
