“Designers, we’re going to Mood!” More than 10 years ago, Tim Gunn and Project Runway introduced millions of viewers to New York’s ultimate fabric mecca, Mood Fabrics. Now, the experts behind this fabric power-house bring their fabric and fashion know-how—plus their behind-the-scenes stories—to the sewing public. The Mood Guide to Fabric and Fashion is the ultimate guide for home-sewers, fashion students, aspiring designers, and Project Runway fans who want to learn everything they need to know to choose and use quality fabric. Drawing upon the expertise of the Mood staff, the book teaches readers the

fundamentals—from where fabric is produced to the ins and outs of its construction—and features a fabric-by-fabric guide to cottons and other plant fibers, wools, silks, knits, and other specialty fabrics. Covered in luxurious silk brocade fabric, the design of this journal is based on centuries old weaving traditions that were once commissioned for the royal houses of India. The delicate textures of the silk threads woven together to make the fabric are soft to the touch but extremely durable. Rembrandt Duits completed his PhD at the University of Utrecht , and works at the Photographic Collection of the Warburg Institute, where he also teaches Renaissance material culture. His thesis, Gold Brocade and Renaissance Painting, won the Karel van Mander Prijs for the best publication on art between 1500 and 1800. Gold Brocade and Renaissance Painting discusses the representation of Italian Renaissance patterned silks in paintings from Italy and the Southern Netherlands , from the 14th to the 16th century. It is the first study to approach this subject from the perspective of material culture, attempting to answer such questions as why the subject of

luxury textiles gained so great a popularity in Renaissance painting, how artists catered for an audience that desired to have gold brocades depicted but did not always possess the financial means to own the actual fabrics, and what the skills artists developed in this field contributed to the rising social status of the medium of painting. The material culture of the grand courts at which real gold brocade played an essential role in the display of wealth and status is compared to that of the socially ambitious but less affluent middle class for whom paintings were often the only affordable substitute for courtly splendour. Thus, the book also addresses the problem of the distinction between fact and fiction, imagination and reality in the account of contemporary social history presented in paintings. Presents a collection of seven fairy tales from different cultures, each of which features clothing or cloth. From Paleolithic flax to 3D knitting, explore the global history of textiles and the world they weave together in this enthralling and educational guide. The story of humanity is the story of textiles -- as old as civilization itself. Since the first thread was spun, the need for textiles has driven technology, business, politics, and culture. In *The Fabric of Civilization*, Virginia Postrel synthesizes groundbreaking research from archaeology, economics, and science to reveal a surprising history. From Minoans exporting wool colored with precious purple dye to Egypt, to Romans arrayed in costly Chinese silk, the cloth trade

paved the crossroads of the ancient world. Textiles funded the Renaissance and the Mughal Empire; they gave us banks and bookkeeping, Michelangelo's David and the Taj Mahal. The cloth business spread the alphabet and arithmetic, propelled chemical research, and taught people to think in binary code.

Assiduously researched and deftly narrated, *The Fabric of Civilization* tells the story of the world's most influential commodity. Excerpt from Grammar of d104ile Design A textile fabric may contain only one element of woven design and yet be profusely embellished without having recourse to colour. Many white and grey linen and cotton, and also white silk, damask and brocade fabrics, are good examples of that class. The construction of such fabrics, and of damasks in particular, is frequently based upon some simple elementary weave which is simply reversed to develop the figure and ground portions, thereby causing warp to preponderate on the surface in some parts, and weft in others hence the contrasting tones of light which enable the figure and ground portions to be distinguished. The most elaborately decorated fabrics will often times be found to contain not more than

three or four different varieties of simple weaves effectively introduced in the scheme of decoration; whilst most fabrics employed for domestic purposes, and many others, contain but one element of design of a simple character and specially suited for a specific purpose. An examination of such fabrics will show that warp and weft are interwoven in some simple definite order or sequence that occurs with perfect regularity throughout the entire fabric. Enterprise networks are large and rely on numerous connected endpoints to ensure smooth operational efficiency. However, they also present a challenge from a security perspective. The focus of this Blueprint is to demonstrate an early threat detection against the network fabric that is powered by Brocade that uses IBM® QRadar®. It also protects the same if a cyberattack or an internal threat by rouge user within the organization occurs. The publication also describes how to configure the syslog that is forwarding on Brocade SAN FOS. Finally, it explains how the forwarded audit events are used for detecting the threat and runs the custom action to mitigate the threat. The focus of this publication is to proactively start a cyber resilience workflow from IBM QRadar to block an IP address when multiple failed logins on

Brocade switch are detected. As part of early threat detection, a sample rule that us used by IBM QRadar is shown. A Python script that also is used as a response to block the user's IP address in the switch is provided. Customers are encouraged to create control path or data path use cases, customized IBM QRadar rules, and custom response scripts that are best-suited to their environment. The use cases, QRadar rules, and Python script that are presented here are templates only and cannot be used as-is in an environment.
