Vols. for 1963- include as pt. 2 of the Jan. issue: Medical subject headings. Mental health problems often debut in early childhood and may last throughout adulthood, thereby making early detection and intervention especially important. The overarching aim of the present thesis was to identify patterns of emotional and behavioural problems indicating mental health problems in preschool children. To facilitate the detection of such problems early on, one available screening instrument Strengths and Difficulties Questionnaire (SDQ), was validated. The development and interaction of externalising problems in preschool children were studied over time. Functioning and behaviour and their relations to protective and risk indicators in both environmental and personal characteristics were explored. The long-term goal was to increase knowledge about early identification of emotional and behavioural problems in preschool

children in order to facilitate early intervention. In Study I (n=690), the subscales Hyperactivity and Conduct Problems were shown to be valid for children in the age group 1–3 years. A reasonable level of validity was found for the age group 4–5 years when using the original SDQ four-factor solution. The preschool teachers considered most of the SDQ items relevant and possible to rate. Based on the results of Study II (n=815), a score of ≥ 12 on the SDQ Total Problems Scale is recommended as a cut-off for Swedish preschool children. There were significant differences between boys and girls on all subscales except for the Emotional subscale. The Swedish norms for SDQ are to a large extent similar to findings from other European countries. Study III (n=195) showed that preschool children's conduct problems decrease over time. Children exhibiting more initial hyperactivity (at year 1) have less reduction in conduct problems over time, i.e. the more hyperactivity early in life, the more conduct problems at year 3. In Study IV (n=197), children high in engagement and social interaction function well over time, even in the presence of hyperactivity, while children with low engagement and interaction alone or in combination with hyperactivity and conduct problems continue to have problems. Stability was related to the existence of a larger number of protective or risk indicators respectively. Taken together, this thesis has shown that the SDQ can be used to identify preschool children at risk of developing mental health problems later in life. Over the past 20 years the number of standards and certification programmes for agricultural production has grown rapidly. Producers who want to export are confronted not only by a plethora of import regulations, but also within import countries by different niche markets for which specific requirements have to be fulfilled. This report gives an overview of standards and certification programmes relevant for fruit and

vegetable producers and exporters in developing countries with a focus on the markets of the United States of America and the European Union. In addition, it gives an overview of current analytical work on standards and trade, reviews major assistance programmes related to standards and provides recommendations for further research. The establishment of the International Risk Governance Council (IRGC) was the direct result of widespread concern that the complexity and interdependence of health, environmental, and technological risks facing the world was making the development and implementation of adequate risk governance strategies ever more difficult. This volume details the IRGC developed and proposed framework for risk governance and covers how it was peer reviewed as well as tested. This handbook explores the rapid growth in childhood developmental disabilities (DD) treatments. It reviews current evidence-based treatments for common psychopathologies and developmental disorders and evaluates the strengths of the treatments based on empirical evidence. Spanning infancy through the transition to young adulthood, chapters provide definitions, etiologies, prevalence, typical presentation and variants, assessment and diagnostic information, and age considerations. Chapters also review established and emerging psychological approaches and pharmacotherapies for cognitive, behavioral, emotional, medical, academic, and developmental issues as diverse as mood disorders, the autism spectrum, memory problems, feeding disorders, Tourette syndrome, and migraines. The wide range of topics covered aids practitioners in working with the complexities of young clients' cases while encouraging further advances in an increasingly relevant field. Topics featured in this handbook include: An introduction to Applied Behavior Analysis. Parent training interventions. Treatment strategies for depression in youth. Assessment

and treatment of self-injurious behaviors in children with DD. Treatment approaches to aggression and tantrums in children with DD. Interventions for children with eating and feeding disorders. The Handbook of Childhood Psychopathology and Developmental Disabilities Treatment is a must-have resource for researchers, graduate students, clinicians, and related therapists and professionals in clinical child and school psychology, pediatrics, social work, developmental psychology, behavioral therapy/rehabilitation, child and adolescent psychiatry, and special education. This Handbook reviews a wealth of research in cognitive and educational psychology that investigates how to enhance learning and instruction to aid students struggling to learn and to advise teachers on how best to support student learning. The Handbook includes features that inform readers about how to improve instruction and student achievement based on scientific evidence across different domains, including science, mathematics, reading and writing. Each chapter supplies a description of the learning goal, a balanced presentation of the current evidence about the efficacy of various approaches to obtaining that learning goal, and a discussion of important future directions for research in this area. It is the ideal resource for researchers continuing their study of this field or for those only now beginning to explore how to improve student achievement. Changes in the labor market globally and in the Nordic countries involve new forms of work and atypical employment among young workers. A significant proportion of young workers are in temporary positions, working irregular working hours, and part-time work. This also applies to the young workers portrayed in this report. They are working at online platforms as e-sport gamers, YouTuber or Influencers, and thus move into the borderland of the meanings we usually ascribe to the categories 'work' and 'working environment'. This

development also apply to traditional professions, such as carpentry work or service work, but the new aspect is that the work is mediated through online platforms, which seems to affect the working environment for those young workers. It is important to know more about new employment forms if we are to improve working environment among these young workers. In this Research Topic we report advances in fundamental and applied aspects of the perennial C4 bioenergy crop *Miscanthus* (*Miscanthus* spp.) and its role in mitigating climate change as part of the bioeconomy. *Miscanthus* is extremely well suited for bioenergy, biofuel and bioproduct production over a wide geographic area including Europe and North America as well as its native Asia. *Miscanthus* offers a unique perspective within plant science: the challenge is to domesticate this novel crop for diverse environments and uses while simultaneously developing sustainable value chains to displace fossil fuels and contribute to climate change mitigation. Contributions to this Research Topic were offered from leading *Miscanthus* researchers from different parts of the world. We accepted 16 articles from 95 authors, which have generated 21,161 views at March 26 2018. Nine of the articles are the output of the European FP7 OPTIMISC project and describe multiple experiments investigating a common set of *Miscanthus* genotypes in Europe and Asia. These papers are complemented by seven additional articles from global authors, providing a comprehensive analysis of the state of the art of *Miscanthus* research and application. The second edition of *Neuro-Oncology: The Essentials* presents a comprehensive, highly readable introduction to the fundamental science and core clinical concepts for successfully managing common problems in neuro-oncology. Tightly focused chapters provide up-to-date systematic coverage of biology, imaging, surgery, radiation, chemotherapy, and biological concepts. The

book addresses specific tumor types in separate chapters, providing detailed discussion of background, incidence, clinical features, management, surgical approaches, recurrence, and outcomes. Highlights: Pearls, pitfalls, controversies, and special considerations in textboxes -- ideal for rapidly reviewing key points More than 250 photographs and illustrations demonstrate important concepts This book is an invaluable reference for neurosurgeons, neurologists, oncologists, residents and fellows in these specialties, as well as for students. Interest in acoustics continues to increase. Although this branch of science was concerned primarily with the promotion of qualitative and quantitative sound transmission until a few decades ago, emphasis is currently placed also on the limitation of sound nuisance and, by extension, the setting of boundaries for permissible sound levels in places where people are found. This last aspect in particular is exercising more and more influence on the design of buildings and machines, and in town and country planning. In addition, sound vibrations, because of their physical characteristics, are being used increasingly in disparate disciplines such as navigation, medical investigation and non destructive materials research. The flood of publications resulting from this increased interest in acoustics has led to a growing number of people being confronted with terminology which had until quite recently only been used by a relatively small group of specialists and had remained largely unknown as a result. This four language dictionary, based on 'W. Reichardt, Technische Akustik; Berlin 1979', has been compiled to make not only this literature but also the nomenclature of equipment and instructions for their use accessible to the specialist and the interested layman. Experiential Learning enables educators, trainers, coaches and facilitators to unleash some of the more potent ingredients of learning through experience. It

presents a simple model: the Learning Combination Lock, which illustrates the wide range of factors that can be altered to enhance the learning experience. The theory is brought to life with hundreds of examples from around the world and covers issues such as: experience and intelligence; facilitation, good practice and ethics; learning environments; experiential learning activities; and working with the senses and emotions. Experiential Learning offers the skills that can be successfully applied to a variety of settings including management education, corporate training, team-building, youth-development work, counselling and therapy, schools and higher education and special needs training. This fully updated third edition includes guidance for coaches, cutting edge new material on sensory intelligence and updated models, tools and case studies throughout. Online supporting resources include 'Introduction to Sensory Intelligence' audio files. A companion to the Getty's prize-winning exhibition catalogue *Illuminating the Renaissance: The Triumph of Flemish Manuscript Painting in Europe*, this volume contains thirteen selected papers presented at two conferences held in conjunction with that exhibition. The first was organized by the Getty Museum, and the second was held at the Courtauld Institute of Art under the sponsorship of the Courtauld Institute and the Royal Academy of Arts. Added here is an essay by Margaret Scott on the role of dress during the reign of Charles the Bold. Texts include Lorne Campbell's research into Rogier van der Weyden's work as an illuminator, Nancy Turner's investigation of materials and methods of painting in Flemish manuscripts, and trenchant commentary by Jonathan Alexander and James Marrow on the state of current research on Flemish illumination. A recurring theme is the structure of collaboration in manuscript production. The essays also reveal an important new patron of manuscript illumination and

address the role of illuminated manuscripts at the Burgundian court. A series of biographies of Burgundian scribes is featured. This book reconsiders the concept of empire and examines the processes of imperial making and undoing in Hittite Anatolia (c. 1600-1180 BCE). A Manual Of Indian Timbers. An Account Of The Growth, Distribution, And Uses Of The Trees And Shrubs Of India And Ceylon With Descriptions Of Their Wood-structure Aristotle's zoological writings with their wealth of detailed investigations on diverse species of animals have fascinated medieval and Renaissance culture. This volume explores how these texts have been read in various traditions (Arabic, Hebrew, Latin), and how they have been incorporated in different genres (in philosophical and scientific treatises, in florilegia and encyclopedias, in theological symbolism, in moral allegories, and in manuscript illustrations). This multidisciplinary and multilinguistic approach highlights substantial aspects of Aristotle's animals. This open access book on straw management aims to provide a wide array of options for rice straw management that are potentially more sustainable, environmental, and profitable compared to current practice. The book is authored by expert researchers, engineers and innovators working on a range of straw management options with case studies from Vietnam, the Philippines and Cambodia. The book is written for engineers and researchers in order to provide them information on current good practice and the gaps and constraints that require further research and innovation. The book is also aimed at extension workers and farmers to help them decide on the best alternative straw management options in their area by presenting both the technological options as well as the value chains and business models required to make them work. The book will also be useful for policy makers, required by public opinion to reduce greenhouse gas emissions and air pollution,

looking for research-based evidence to guide the policies they develop and implement. The militarized legacy of the digital cloud: how the cloud grew out of older network technologies and politics. We may imagine the digital cloud as placeless, mute, ethereal, and unmediated. Yet the reality of the cloud is embodied in thousands of massive data centers, any one of which can use as much electricity as a midsized town. Even all these data centers are only one small part of the cloud. Behind that cloud-shaped icon on our screens is a whole universe of technologies and cultural norms, all working to keep us from noticing their existence. In this book, Tung-Hui Hu examines the gap between the real and the virtual in our understanding of the cloud. Hu shows that the cloud grew out of such older networks as railroad tracks, sewer lines, and television circuits. He describes key moments in the prehistory of the cloud, from the game “Spacewar” as exemplar of time-sharing computers to Cold War bunkers that were later reused as data centers. Countering the popular perception of a new “cloudlike” political power that is dispersed and immaterial, Hu argues that the cloud grafts digital technologies onto older ways of exerting power over a population. But because we invest the cloud with cultural fantasies about security and participation, we fail to recognize its militarized origins and ideology. Moving between the materiality of the technology itself and its cultural rhetoric, Hu's account offers a set of new tools for rethinking the contemporary digital environment. Globalisation and demographic trends underline the twin challenge of the Nordics with productivity stagnation and a decreasing work force. Increasing productivity and the work force will be an answer to both. A good work environment can do both: If less people have to take sick leave as result of bad work environments, this will contribute to increasing the work force. Also, for some time, a

relationship between work environment and productivity has been hypothesised. Happy, healthy workers, in short, are more productive than not-so-happy and not-so-healthy workers are. This report is based on the most comprehensive empirical study of the cohesion between working environment and productivity. It confirms the hope of many, i.e. that improvements in working environment and improved productivity are highly correlated. The results are robust across time and the investigated countries.
