Engaging and provocative writing, as well as a knack for revealing the "invisible hand" of economics at work have made Cowen and Tabarrok's Modern Principles of Economics a singularly distinctive and effective textbook for the principles course. The thoroughly updated new edition of Modern Principles again draws on a wealth of captivating applications to show readers how economics shed light on business, politics, world affairs, and everyday life just as the authors do in their wildly successful blog, marginalrevolution.com. Mateer and Coppock's approach teaches economic decision-making with applications that students will remember. Principles of Macroeconomics by Howard J. Sherman and Michael A. Meeropol differs from other texts in that this book stresses far more the inherent instability of the macro-economy. The details of the business cycle come early and are integrated throughout the core of usual macro topics (C, I, G, X).

The book puts inflation into its proper perspective by recognizing that unemployment is the much greater threat to the economic well being of the vast majority of the people. Instead unemployment, and its human toll, are given far greater emphasis than other texts. The Keynesian model is fully developed; so is the statistical analysis of Wesley Mitchell. The neoclassical model is covered in both its historical evolution and in its implications for current policy debates. Finally, there is strong coverage of the Euro-zone crisis and its linkages to the United States.

Authors Bob Frank, Ben Bernanke, and introducing Kate Antonovics from the University of California San Diego, present a coherent short list of core principles in introductory economics and reinforce them by illustrating and applying each in numerous contexts. With engaging questions, explanations and exercises, the authors help students relate economic principles to a host of everyday experiences such as going to the ATM or purchasing airline tickets. Throughout this process, the authors encourage students to become "economic naturalists:" people who employ basic economic principles to understand and explain what they observe in the world around them.

Using intriguing pop culture examples, the Tenth Edition is revised to include the most comprehensive coverage of the financial and economic crisis available in a principles of economics text. Inspired by Economics: How We Live, economist Victor Fuchs's 1983 National Book Award winner, the text provides an economic framework for exploring the wide array of choices that span a person's life cycle. The authors build from the individual to the household to the firm and then to the economy at large, moving from realistic examples from everyday life to the broad, enduring principles of economic behavior. Authors Bob Frank, Ben Bernanke, and introducing Kate Antonovics from the University of California San Diego and Ori Heffetz from Cornell University, present a coherent short list of core principles in introductory economics and reinforce them by illustrating and applying each in numerous contexts. With engaging questions, explanations and exercises, the authors help students relate economic principles to a host of everyday experiences such as

going to the ATM or purchasing airline tickets.

Throughout this process, the authors encourage students to become “economic naturalists:” people who employ basic economic principles to understand and explain what they observe in the world around them. Principles of Macroeconomics, sixth edition, is thoroughly integrated with the adaptive digital tools available in McGraw-Hill’s LearnSmart Advantage Suite, proven to increase student engagement and success in the course.
