Reservoir Fisheries of India Jun 25 2021 The existing literature on limnology and fisheries of Indian reservoirs has been reviewed by covering more than 100 reservoirs located in various parts of the country. An assessment of environment-mediated

production functions of reservoirs has been attempted. Since the ecosystem processes in reservoirs belonging to different geo-climatic regions exhibit wide variations depending on meteorological, morphometric and hydro-edaphic features of the impoundments, an effort has been made to gauge the influence of these abiotic variables on the production dynamics. Authentic information on water areas under different categories of reservoirs has been collected and interpreted in respect of all the Indian States. An attempt has also been made to resolve the anomalies pertaining to classification and nomenclature to the extent possible. Various fisheries management norms followed in the reservoirs of the country including the selection of species for stocking, stocking rate and introduction of exotic species have been reviewed. Indian reservoirs have been stocked with the Indo-Gangetic carps for many decades and the impact of this stocking has been assessed in terms of fish production and the indigenous faunistic diversity.

Principles of Bioseparations Engineering Mar 15 2023 Bioseparations engineering deals with the scientific and engineering principles involved in large-scale separation and purification of biological products. It is a key component of most chemical engineering/biotechnology/bioprocess engineering programmes. This book discusses the underlying principles of bioseparations engineering written from the perspective of an undergraduate course. It covers membrane based bioseparations in much more detail than some of the other books on bioseparations engineering. Based largely on the lecture notes the author developed to teach the course, this book is especially suitable for use as an undergraduate level textbook, as most other textbooks are targeted at graduate students.

Financial Therapy Mar 03 2022 Money-related stress dates as far back as concepts of money itself. Formerly it may have waxed and waned in tune with the economy, but today more individuals are experiencing financial mental anguish and self-destructive behavior regardless of bull or bear markets, recessions or boom periods. From a fringe area of psychology, financial therapy has emerged to meet increasingly salient concerns. Financial Therapy is the first full-length guide to the field, bridging theory, practical methods, and a growing cross-disciplinary evidence base to create a framework for improving this crucial aspect of clients' lives. Its contributors identify money-based disorders such as compulsive buying, financial hoarding, and workaholism, and analyze typical early experiences and the resulting mental constructs

("money scripts") that drive toxic relationships with money. Clearly relating financial stability to larger therapeutic goals, therapists from varied perspectives offer practical tools for assessment and intervention, advise on cultural and ethical considerations, and provide instructive case studies. A diverse palette of research-based and practice-based models meets monetary mental health issues with well-known treatment approaches, among them: Cognitive-behavioral and solution-focused therapies. Collaborative relationship models. Experiential approaches. Psychodynamic financial therapy. Feminist and humanistic approaches. Stages of change and motivational interviewing in financial therapy. A text that serves to introduce and define the field as well as plan for its future, Financial Therapy is an important investment for professionals in psychotherapy and counseling, family therapy, financial planning, and social policy.

Facioscapulohumeral Muscular Dystrophy (FSHD) Feb 02 2022 Facioscapulohumeral muscular dystrophy (FSHD) is a genetic disorder involving slowly progressive muscle degeneration in which the muscles of the face, shoulder blades and upper arms are among the most severely affected. It is the third most common inherited muscular dystrophy, affecting 1 in 20,000. The search for the molecular basis of the disease is of interest to all genetic researchers, involving a deletion outside a coding region resulting in over-expression of adjacent genes. This volume summarizes the current understanding of the disorder, including clinical, molecular and therapeutic aspects.

Emergency Management of Thalassaemia Oct 30 2021 The multi-organ pathology of the thalassaemias means that the most successful patient treatment programmes involve a number of medical staff, led by paediatricians and haematologists, but including other specialists in a multidisciplinary approach. However, this means that medical professionals not involved in such multidisciplinary groups, including primary care

physicians and the staff of Accident and Emergency departments, rarely treat patients with thalassaemia. As a result, their knowledge of how to address acute complications in such patients is extremely limited. This handbook aims to provide a brief evaluation of the situations in which a thalassaemia patient may seek help beyond the specialized environment he/she is used to. The layout of the handbook is intended to enable the medical professional in a busy clinical setting to draw essential information at a glance, supporting rapid, accurate as possible, decisions on how to proceed.

The End of Illness Sep 28 2021 Challenges popular conceptions to outline new methods for promoting wellness and longevity, arguing that traditional medicine has not been successful in treating serious illness while urging readers to embrace a systemic understanding of the body that incorporates the use of revolutionary technologies.

Tooth Movement Sep 09 2022 With the intention of improving the rate, quality, and stability of orthodontic tooth movement, those in the field are now moving toward accomplishing this 'acceleration' with minimally or non-invasive methods. New procedures have been widely tested in humans, animal models, and in vitro. While interest is growing both in the industry and at the clinical level, the understanding of the biology is limited. Considering that a simple increase in force will result in tooth morbidity and arrest of the tooth migration, a multi-disciplinary approach is critical for success. This publication brings together multi-disciplinary expertise on a wide variety of processes related to and involved in orthodontic tooth movement. The premise is that, by better understanding the biological structures and the mechanism through which they respond to biomechanical forces, one can get a better assessment of the 'acceleration'. This work presents research aimed at an improved understanding of conventional and accelerated orthodontic tooth movement from a biological perspective and will be of great value to clinicians, researchers, academics, and students.

Protein Bioseparation Using Ultrafiltration Apr 04 2022 Ultrafiltration is a pressure-driven, membrane-based separation process, which is used for a broad variety of applications, ranging from the processing of biological macromolecules to wastewater treatment. It has significant advantages over competing separation technologies. Food and biotechnological applications account for nearly 40% of the current total usage of ultrafiltration membranes. Protein bioseparation is an important component of this application segment. Ultrafiltration is used for protein concentration, desalting, clarification and fractionation (i.e. protein-protein separation). Concentration, desalting and clarification are technologically less demanding and have been in used in the bioprocess industry for some time. Protein fractionation, on the other hand, is a challenging proposition and is definitely a more recent development. This book focuses primarily on protein fractionation. Contents: Protein Bioseparation: An Overview Ultrafiltration: An Overview Membranes Membrane Module and Operation Membrane Fouling Permeate Flux in Ultrafiltration Protein Transmission Through Ultrafiltration Membranes Selectivity of Protein Fractionation in Ultrafiltration Protein Concentration Diafiltration of Protein Solutions Protein Clarification Protein Fractionation New Developments Readership: Graduate students, academics and researchers in biotechnology, biochemistry, food sciences, bioengineering/biomedical engineering and chemical engineering.

The Myelodysplastic Syndromes May 25 2021 Myelodysplastic syndromes (MDS) are the most common hematological malignancies involving mostly the elderly population. The major morbidity relates to patients' symptomatic cytopenias. MDS was previously named as "preleukemia " or " smoldering leukemia" as the lack of terminal cells in MDS and because about 25% of all cases progresses into acute myeloid leukemia. According to various reports the annual incidence of MDS ranges widely from 2-12 per 100.000, increasing to 30-50 cases per 100.000 among persons aged 70 or older. It is believed that the true incidence of MDS have been underestimated however it seems to be comparable to that for multiple myeloma and chronic lymphocytic leukemia. In the past decade much progress had been made; we know more on the disease pathology, there is more emphasis on the care and more targeted therapy had been invested. Athors provide updated knowledge in this book on all clinically important aspects of the disease. Hot topics of our days are discussed in chapters by outstanding and well known scientists from all over the world. We would offer this product both for medical students and postgraduates as well as for all who are interested in this very exciting and fast progressing field of hematology. With this work authors should call attention on the disease for decision makers in healt care systems as well.
