Complete proceedings of the 13th European Conference on Research Methodology for Business and Management Studies ECRM 2013 PRINT version Published by Academic Conferences and Publishing International Limited. Although the existing layering infrastructure--used globally for designing computers, data networks, and intelligent distributed systems and which connects various local and global communication services--is

conceptually correct and pedagogically elegant, it is now well over 30 years old has started create a serious bottleneck. Using Cross-Layer Techniques for Communication Systems: Techniques and Applications explores how cross-layer methods provide ways to escape from the current communications model and overcome the challenges imposed by restrictive boundaries between layers. Written exclusively by well-established researchers, experts, and professional engineers, the book will present basic concepts, address different approaches for solving the cross-layer problem, investigate recent developments in cross-layer problems and solutions, and present the latest applications of the cross-layer in a variety of systems and networks. Quality has quickly become one of the most important decision-making factors for consumers. And although organizations invest considerable resources into building the right quality management systems (QMSs), in many instances, the adoption of such quality improvement tools are just not enough. Building Quality Management Systems: Selecting the Right Methods and Tools explains exactly what directors, practitioners, consultants, and researchers must do to make better choices in the design, implementation, and improvement of their QMSs. Based on the authors' decades of industrial experience working on business improvement projects for multinationals looking to design or improve their QMSs, the book discusses building QMSs based on two important organizational elements: needs and resources. It begins with an overview of QMSs and systems thinking and the impact of QMSs on financial performance. Illustrating the process management approach, it reviews the most well-known business and quality improvement models, methods, and tools that support a major QMS. The authors introduce their own time-tested methodology for designing, implementing, and enhancing your own QMS. Using their proven method, you will learn how to: Implement a strategic quality plan based on your specific needs, capabilities, cost-benefits, policies, and business strategies Select the right models, methods, and tools to be adopted as part of your QMS Understand the critical success factors and implementation challenges Evaluate the level of maturity of your QMS and your implementation efforts Highlighting the importance of quality as a way of life, this book supplies the understanding you'll need to make the right choices in the development and deployment of your QMS. With a clear focus on business performance and process management, it provides the basis for creating the quality management culture required to become a world-class organization. Various numerical and analytical methods have been used to investigate the models of real-world phenomena. Namely, real-world models from quantum physics have been investigated by many researchers. This Research Topic aims to promote and exchange new and important theoretical and numerical results to study the dynamics of complex physical systems. In particular, the Research Topic will focus on numerical and analytical methods for nonlinear partial differential equations which have applications for quantum physical systems. Authors are encouraged to introduce their latest original research articles. The Research Topic will cover, but is not limited to, the following themes: - Mathematical methods in physics - Representations of Lie groups in physics - Quantum fields - Advanced numerical methods and techniques for nonlinear partial differential equations - Schrödinger classical and fractional operators - Conservation laws Presenting innovative research methods, this second edition of a bestseller describes a simple and practical methodology for conducting cutting-edge design science research (DSR). It provides comprehensive guidance on how to conduct such research and supplies in-depth treatment of design science theory and the different types of theory that can be generated in design science research. Making novel use of the concept of patterns, it presents 84 research patterns for conducting effective DSR. It emphasizes design science theory throughout and is filled with practical examples of using patterns to conduct information and communication technology research (ICT). With a focus on reusing research activities to increase the effectiveness and efficiency of conducting design science research, the book relies on familiar patterns to provide the fundamentals of various research philosophies and techniques required to innovate ICT. It describes design science research in relation to other information systems research paradigms such as positivist and interpretivist research. New to this edition are relevant design science research patterns adapted from TRIZ, the widely regarded European engineering design and creativity method. This edition also provides greatly expanded treatment of theory building in design science research (DSR), a topic of rapidly growing interest in addition to a new chapter presenting a framework for theory development in DSR. The book provides an expanded examination of patterns in DSR presented using a new pattern classification mechanism to group patterns with like functionality. This book will be of value to those interested in learning to conduct design science research, particularly in the ICT disciplines the book focuses on. Winner of the 2019 Mark E. Mack Community Engagement Award from the Society for Historical Archaeology, the collaborative archaeology project at the former Stewart Indian School documents the archaeology and history of a heritage project at a boarding school for American Indian children in the Western United States. In Collaborative Archaeology at Stewart Indian School, the team's collective efforts shed light on the children's education, foodways, entertainment, health, and resilience in the face of the U.S. government's attempt to forcibly assimilate Native populations at the turn of the twentieth century, as well as school life in later years after reforms. This edited volume addresses the theory, methods, and outcomes of collaborative archaeology conducted at the Stewart Indian School site and is a genuine collective effort between archaeologists, former students of the school, and other tribal members. With more than twenty contributing authors from the University of Nevada, Reno, Nevada Indian Commission, Washoe Tribal Historic Preservation Office, and members of Washoe, Paiute, and Shoshone tribes, this rich case study is strongly influenced

by previous work in collaborative and Indigenous archaeologies. It elaborates on those efforts by applying concepts of governmentality (legal instruments and practices that constrain and enable decisions, in this case, regarding the management of historical populations and modern heritage resources) as well as social capital (valued relations with others, in this case, between Native and non-Native stakeholders). As told through the trials, errors, shared experiences, sobering memories, and stunning accomplishments of a group of students, archaeologists, and tribal members, this rare gem humanizes archaeological method and theory and bolsters collaborative archaeological research. The two-volume set LNCS 8802 and LNCS 8803 constitutes the refereed proceedings of the 6th International Symposium on Leveraging Applications of Formal Methods, Verification and Validation, ISoLA 2014, held in Imperial, Corfu, Greece, in October 2014. The total of 67 full papers was carefully reviewed and selected for inclusion in the proceedings. Featuring a track introduction to each section, the papers are organized in topical sections named: evolving critical systems; rigorous engineering of autonomic ensembles; automata learning; formal methods and analysis in software product line engineering; model-based code generators and compilers; engineering virtualized systems; statistical model checking; risk-based testing; medical cyber-physical systems; scientific workflows; evaluation and reproducibility of program analysis; processes and data integration in the networked healthcare; semantic heterogeneity in the formal development of complex systems. In addition, part I contains a tutorial on automata learning in practice; as well as the preliminary manifesto to the LNCS Transactions on the Foundations for Mastering Change with several position papers. Part II contains information on the industrial track and the doctoral symposium and poster session. The book presents a collection of essays addressing a perceived need for persistent and logical thinking, critical reasoning, rigor and relevance on the part of researchers pursuing their doctorates. Accordingly, eminent experts have come together to consider these significant aspects of the research process, which result in different knowledge claims in different fields or subject areas. An attempt has been made to find a common denominator across diverse management disciplines, so that the broadest range of researchers can benefit from the book. The topics have been carefully chosen to cover problem formulation, contextualizing, soft & hard modeling, qualitative and quantitative analysis and ethical issues, in addition to the design of experiments and survey-based research. The distinguishing feature of this book is that it recognizes the diverse backgrounds of scholars from different interdisciplinary areas as well as their varying needs with regard to modeling, observations, measurements, aggregation, data analyses, etc. After all, researchers are expected to deepen our understanding, expand on existing information, introduce fresh insights, present new evidence and/or disprove accepted theories, hypotheses etc. More importantly, the book cautions against the over-reliance on software packages and mechanical interpretation of results based on the size, sign and significance of the coefficients obtained. Instead, the focus is on the underlying theories, hypotheses and relationships and on establishing new ones. In doing so, due care is taken to clearly enunciate what exactly constitutes a knowledge claim and what is methodology as distinct from methods, tools and techniques. This book is the first of its kind on qualitative research in management in the Indian context. It covers the philosophy and practice of qualitative research, and presents the journeys of 10 management scholars who describe their

experiences of doing qualitative research while explaining their choice of varied methods. Both aspiring and experienced management researchers will find it an invaluable resource. Although 'doing good' is our innate nature, we often get lost in the complexities and view goodness as a distant dream. Making this dream of goodness a reality is often thwarted by thoughts surrounding sustainability. Thus, all good initiatives require a focus on sustainability and this has become one of the greatest and most formidable challenges faced by any social enterprise. The book documents the understanding of the sustainability of one of the most celebrated forms of social enterprise of our times — Microfinance Institutions (MFIs) gained through a mixed-methods research investigation. It attempts to answer pertinent questions such as: What are the determinant and discriminating factors for the sustainability of MFIs in India? How are these factors being managed by the operationally efficient Indian MFIs that remained sustainable at reasonable interest rates before the onset of the crisis and ceilings imposition in Indian microfinance markets? What does the Indian microfinance crisis teach us about sustainability management and mismanagement? In a nutshell, the answers show that sustainability is a strategic issue that needs managerial attention and not a matter to be left to serendipity. At a time when the industry is recovering from the adverse effects of a crisis and when there are still contentions as to whether the rate fixed by the regulator is enough for the sustenance of the MFIs, the findings mentioned in the book revive the lost hope for the Indian microfinance industry. By deciphering the strategies used by efficient and sustainable MFIs and discussing the lessons that the crisis has imparted to the Indian microfinance markets, this book will enable Indian MFIs to march towards efficient and sustainable operations without losing focus on their clients.
