**Health and the Millennium Development Goals** Jul 19 2022 This WHO's report provides a global overview of progress towards each of the health MDGs to date and identifies the challenges to be addressed if we are to meet the goals. It presents the essential elements - the strategies and inputs - that will help the international community working collectively, to tackle the health crisis facing many poor countries, and in doing so, contribute to poverty reduction.

The Protocol to the African Charter on Human and Peoples' Rights on the Rights of Women in Africa: a commentary Feb 11 2022 The first in a series of PULP commentaries on African human rights law, under the series title: PULP Commentaries on African human rights law Since its adoption on 11 July 2003, the Protocol to the African Charter on Human and Peoples' Rights on the Rights of Women in Africa (the Maputo Protocol) has become a landmark on the African human rights landscape. It has steadily gained prominence as a trail-blazing instrument, responsive to the diverse realities of women on the African continent. This comprehensive Commentary on the Maputo Protocol, the first of its kind, provides systematic analysis of each article of the Protocol, delving into the drafting history, and elaborating on relevant key concepts and normative standards. This Commentary aims to be a 'one-stop-shop' for anyone interested in the Maputo Protocol, such as researchers, teachers, students, practitioners, policymakers and activists.

**Practical Tools for Designing and Weighting Survey Samples** Feb 23 2023 Survey sampling is fundamentally an applied field. The goal in this

book is to put an array of tools at the fingertips of practitioners by explaining approaches long used by survey statisticians, illustrating how existing software can be used to solve survey problems, and developing some specialized software where needed. This book serves at least three audiences: (1) Students seeking a more in-depth understanding of applied sampling either through a second semester-long course or by way of a supplementary reference; (2) Survey statisticians searching for practical guidance on how to apply concepts learned in theoretical or applied sampling courses; and (3) Social scientists and other survey practitioners who desire insight into the statistical thinking and steps taken to design, select, and weight random survey samples. Several survey data sets are used to illustrate how to design samples, to make estimates from complex surveys for use in optimizing the sample allocation, and to calculate weights. Realistic survey projects are used to demonstrate the challenges and provide a context for the solutions. The book covers several topics that either are not included or are dealt with in a limited way in other texts. These areas include: sample size computations for multistage designs; power calculations related to surveys; mathematical programming for sample allocation in a multi-criteria optimization setting; nuts and bolts of area probability sampling; multiphase designs; quality control of survey operations; and statistical software for survey sampling and estimation. An associated R package, PracTools, contains a number of specialized functions for sample size and other calculations. The data sets used in the book are also available in PracTools, so that the reader may replicate the examples or perform further analyses.

**Oxford Textbook of Obstetric Anaesthesia** Aug 08 2021 This textbook provides an up-to-date summary of the scientific basis, assessment for and provision of anaesthesia throughout pregnancy and labour. It is divided into nine sections including physiology, assessment, complications and systemic disease.

Ethiopia Health Extension Program Jun 29 2023 As a low-income country, Ethiopia has made impressive progress in improving health outcomes. This report examines how Ethiopia's Health Extension Program (HEP) has contributed to the country's move toward Universal Health Coverage (UHC), and to shed light on how other countries may learn from Ethiopia's experiences of HEP when designing their own path to UHC. HEP is one of the government's UHC strategies introduced in a context of limited resources and low coverage of essential health services. The key aspects of the program include the capacity building and mobilization of more than 30, 000 Health Extension Workers (HEWs) targeting more than 12 million model families, and the mobilization of health development army ? to support the community-based health system. Using the HEP-UHC conceptual model and data from Demographic and Health Surveys, the study examines how the HEP has contributed to the country's move toward UHC. During the period that the HEP has been implemented, the country has experienced significant improvements in many dimensions: in terms of socioeconomic, psychological, behavioral, and biological dimensions of the beneficiaries; and in terms of the coverage of health care services. The study finds an accelerated rate of improvements among the rural, less-educated, and the poor population, which is leading to an overall reduction in equity gaps and improvements in the equity indicators including the concentration indices - that suggest a more equitable distribution of resources and health outcomes. The HEP in Ethiopia has demonstrated that an institutionalized community approach is effective in helping a country make progress toward UHC. The elements of success in the HEP include the emphasis on community mobilization which identifies community priorities, engages and empowers community members, and supports their ability to solve local problems. The other aspect of HEP is the emphasis on institutionalization of the activities, which addresses the sustainability of community programs through high level of political commitment, and effective coordination of national policies and leveraging of support from partners. These findings may offer useful lessons for other low income countries facing similar challenges in developing and implementing a sustainable UHC strategy.

*WHO Recommendations on Antenatal Care for a Positive Pregnancy Experience* Sep 01 2023 Within the continuum of reproductive health care,

antenatal care provides a platform for important health-care functions, including health promotion, screening and diagnosis, and disease prevention. It has been established that, by implementing timely and appropriate evidence-based practices, antenatal care can save lives. Endorsed by the United Nations Secretary-General, this is a comprehensive WHO guideline on routine antenatal care for pregnant women and adolescent girls. It aims to complement existing WHO guidelines on the management of specific pregnancy-related complications. The guidance captures the complex nature of the antenatal care issues surrounding healthcare practices and delivery, and prioritizes person-centered health and well-being --- not only the prevention of death and morbidity --- in accordance with a human rights-based approach.

Managing Obstetric Emergencies and Trauma Oct 22 2022 Obstetric emergencies are unplanned and often unanticipated. Management requires a clear understanding of the life-saving and damage-limiting treatments that can be implemented.

**Best Practice in Labour and Delivery** May 24 2020 In light of revised recommendations for intrapartum care, this updated edition reviews best practice in all aspects of labour and delivery.

In Her Lifetime Jul 07 2021 The relative lack of information on determinants of disease, disability, and death at major stages of a woman's lifespan and the excess morbidity and premature mortality that this engenders has important adverse social and economic ramifications, not only for Sub-Saharan Africa, but also for other regions of the world as well. Women bear much of the weight of world production in both traditional and modern industries. In Sub-Saharan Africa, for example, women contribute approximately 60 to 80 percent of agricultural labor. Worldwide, it is estimated that women are the sole supporters in 18 to 30 percent of all families, and that their financial contribution in the remainder of families is substantial and often crucial. This book provides a solid documentary base that can be used to develop an agenda to guide research and health policy formulation on female health---both for Sub-Saharan Africa and for other regions of the developing world. This book could also help facilitate ongoing, collaboration between African researchers on women's health and their U.S. colleagues. Chapters cover such topics as demographics, nutritional status, obstetric morbidity and mortality, mental health problems, and sexually transmitted diseases, including HIV.

**Telephone Triage for Obstetrics and Gynecology** Apr 03 2021 This telephone triage book is designed for use by professional nurses assessing and advising patients over the telephone on topics related to obstetrics and gynecology. It is designed to crystalize the professionals existing knowledge base and to provide clear guidance on handling a wide-variety of patient situations about which the triage nurse might need to work through. the protocols are organized alphabetically by major topic areas and outline the salient medical, legal and practical considerations involved important educational points are highlighted to reinforce important points to stres

**Management of Labor and Delivery** Nov 22 2022 The process of labor and delivery has been one of the most perilous activities in human life. The awkward evolutionary compromises giving rise to humans makes birthing potentially life threatening for both mother and child. Despite the development of modern care, labor and delivery continues to be a dangerous process even though the levels of fatality have decreased over the past several decades. This clinically focused guide to modern labor and delivery care covers low and high-risk situations, the approach of the team in achieving a successful outcome and what to consider when quick decisions have to be made. Aimed at both trainee and practicing obstetrician-gynecologists, this new edition includes practical guidance such as algorithms, protocols, and quick-reference summaries. It is squarely focused on the process of birth and concentrates on modern clinical concerns, blending science with clinical applications.

*A Multidisciplinary Approach to Obstetric Fistula in Africa* Aug 27 2020 This book applies a multi-disciplinary lens to examine obstetric fistula, a childbirth injury that results from prolonged, obstructed labor. While obstetric fistula can be prevented with emergency obstetric care, it continues to

occur primarily in resource-limited settings. In this volume, specialists in the anthropological, psychological, public health, and biomedical disciplines, as well as health policy experts and representatives of governmental and non-governmental organizations discuss a scoping overview on obstetric fistula, including prevention, treatment, and reducing stigma for survivors. This comprehensive resource is useful in understanding the risk factors, epidemiology, and social, psychological, and medical effects of obstetric fistula. Topics explored include: A Human Rights Approach Toward Eradicating Obstetric Fistula Obstetric Fistula: A Case of Miscommunication – Social Experiences of Women with Obstetric Fistula Classification of Female Genital Tract Fistulas Training and Capacity-Building in the Provision of Fistula Treatment Services Designing Preventive Strategies for Obstetric Fistula Sexual Function in Women with Obstetric Fistula Social and Reproductive Health of Women After Obstetric Fistula Repair Making the Case for Holistic Fistula Care Addressing Mental Health in Obstetric Fistula Patients Physical Therapy for Women with Obstetric Fistula A Multidisciplinary Approach to Obstetric Fistula in Africa is designed for professional use by NGOs, international aid organizations, governmental and multilateral agencies, healthcare providers, public health specialists, anthropologists, and others who aim to improve maternal health across the globe. Although the book's geographic focus is Africa, it may serve as a useful resource for individuals who aim to address obstetric fistula in other settings. The book may also be used as an educational tool in courses/programs that focus on Global Health, Maternal and Child Health, Epidemiology, Medical Anthropology, Gender/Women's Studies, Obstetrics, Global Medicine, Nursing, and Midwifery.

Gynaecology: Evidence-Based Algorithms May 17 2022 Provides evidence-based guidelines in schematic flowcharts, representing a step-by-step method of solving clinical problems in gynaecology.

**Varney's Midwifery** Mar 27 2023 Known as the 'bible' of midwifery, this new edition of Varney's Midwifery has been extensively revised and updated to reflect the full scope of current midwifery practice in a balance of art and science, a blend of spirituality and evidence-based care, and a commitment to being with women.

**Obstetric Fistula** Jul 31 2023 This practical manual has three main objectives: to draw attention to the urgent issue of obstetric fistula; provide background information along with principles for developing fistula prevention and treatment strategies and programmes; and contribute to the development of more effective services for women under treatment for fistula repair.

**Managing Complications in Pregnancy and Childbirth** Jan 25 2023 The emphasis of the manual is on rapid assessment and decision making. The clinical action steps are based on clinical assessment with limited reliance on laboratory or other tests and most are possible in a variety of clinical settings.

Obstetric and Intrapartum Emergencies Nov 10 2021 Global and national confidential inquiry reports show that 60 to 80% of maternal and neonatal morbidity and mortality are due to avoidable errors. This comprehensive and illustrated second edition offers a practical guide to the management of obstetric, medical, surgical, anaesthetic and newborn emergencies in addition to organisational and training issues. The book is divided conveniently into nine sections and updated throughout in line with modern research and practice. Several new chapters cover setting up skills and drills training in maternity services to reduce avoidable harm, managing obstetric emergencies during 'home births' and in low-risk midwifery units, and minimizing maternal and fetal morbidity in failed operative vaginal delivery. Each chapter includes a practical algorithm for quick reference, the scientific basis for proposed actions, a case-based practical exercise and useful learning tools such as 'Key Pearls' and 'Key Pitfalls'. An invaluable resource for obstetricians, neonatologists, midwives, medical students, anesthesiologists and the wider perinatal team.

The EBCOG Postgraduate Textbook of Obstetrics & Gynaecology Sep 20 2022 This authoritative textbook provides a much-needed guide for postgraduate trainees preparing for the European Board and College of Obstetrics and Gynaecology (EBCOG) Fellowship examination. Published in

association with EBCOG, it fully addresses the competencies defined by the EBCOG curriculum and builds the clinical practice related to these competencies upon the basic science foundations. Volume 1 covers the depth and breadth of obstetrics, and draws on the specialist knowledge of four highly experienced Editors and over 100 contributors from across Europe, reflecting the high-quality training needed to ensure the safety and quality of healthcare for women and their babies. It incorporates key international guidelines throughout, along with colour diagrams and photographs for easy understanding. This is an invaluable resource, not only for postgraduate trainees planning to sit the EFOG examination, but also for practising specialists looking to update their knowledge and skills to meet the ever-evolving complexity of clinical practice.

**Neonatal and Perinatal Mortality** Oct 10 2021 This report provides neonatal and perinatal mortality estimates by country, regional groupings and globally. For countries that do not have data, models were developed to estimate mortality. Since data on deaths come from a number of different sources, the methods used to obtain the estimates are also described. Country-specific estimates of stillbirth and early neonatal deaths are published here for the first time. Estimates of stillbirth deaths that occur during delivery (intrapartum) by regional groupings, as well as estimates of sex ratio in neonatal, early neonatal and stillbirth mortality for the developing world are also included.--Publisher's description.

[Guidelines for the management of symptomatic sexually transmitted infections](#) Oct 29 2020 The WHO global health sector strategy on sexually transmitted infections, 2016–2021, endorsed by the World Health Assembly in 2016, aims to eliminate STIs as a public health threat by 2030. In 2019, WHO published estimates of new cases of chlamydia, gonorrhoea, syphilis and trichomoniasis. Recent changes in the epidemiology of STIs and progress in prevention, diagnosis and treatment of STIs and HIV have necessitated changes in approaches to STI prevention and management. To address these STIs, the most widely used approach in clinical settings is the syndromic management of STIs. In most resource-limited settings, the syndromic management flow charts are still the standard of care where laboratory diagnosis is not available or is hard to access. The objectives of these guidelines are to provide updated, evidence-informed clinical and practical recommendations on the case management of people with symptoms of STIs; and to support countries in updating their national guidelines for the case management of people with symptoms of STIs. These guidelines include the management of symptomatic infections related to urethral discharge syndrome, including persistent urethral discharge syndrome; vaginal discharge syndrome, including persistent vaginal discharge; anorectal infection; genital ulcer disease syndrome; and lower abdominal pain syndrome. These guidelines are intended for programme managers for STI prevention and control at the national level and the health-care providers at the frontline – primary, secondary and tertiary health care.

**WHO antenatal care recommendations for a positive pregnancy experience. Nutritional interventions update** Jan 13 2022 The World Health Organization's comprehensive antenatal care (ANC) guideline WHO recommendations on antenatal care for a positive pregnancy experience was first published in 2016 with the objective of improving the quality of routine health care that all women and adolescent girls receive during pregnancy. The overarching principle - to provide pregnant service users with a positive pregnancy experience - aims to encourage countries to expand their health-care agendas beyond survival, with a view to maximizing health, human rights and the potential of their populations. This guideline presents that evidence and updated recommendation on antenatal vitamin D supplements, which updates and does not alter the corresponding recommendation previously issued.

**The Obstetric Hematology Manual** Jun 17 2022 Obstetric hematology is a fast-growing area of medicine covering the diagnosis and management of hematological problems of pregnancy. Comprehensive in approach, The Obstetric Hematology Manual addresses the many hematological conditions that can cause serious problems in pregnancy, delivery and the post-partum period for both mother and baby. Written by a team of international authorities, this text provides up-to-date, evidence-based guidelines on best care, as well as sound advice based on the experience and

opinion of experts. Where appropriate, basic principles are discussed to clarify the rationale for management, and systems and procedures for disease prevention are highlighted. Many conditions and cases are discussed, including venous thromboembolism, pre-eclampsia, anemia, thrombocytopenia and inherited disorders. This book will appeal to both trainees and practitioners in obstetrics, obstetric medicine, obstetric anesthesia and hematology. It is also an accessible text for midwives, nurses, and laboratory staff.

**Domestic Violence and Mental Health** Jan 01 2021 People with mental health problems are more likely to be a victim of domestic violence than the general population. This text offers practical guidance on how mental health professionals can identify and respond to domestic violence experienced by their patients.

*Disease Control Priorities, Third Edition (Volume 2)* Nov 30 2020 The evaluation of reproductive, maternal, newborn, and child health (RMNCH) by the Disease Control Priorities, Third Edition (DCP3) focuses on maternal conditions, childhood illness, and malnutrition. Specifically, the chapters address acute illness and undernutrition in children, principally under age 5. It also covers maternal mortality, morbidity, stillbirth, and influences to pregnancy and pre-pregnancy. Volume 3 focuses on developments since the publication of DCP2 and will also include the transition to older childhood, in particular, the overlap and commonality with the child development volume. The DCP3 evaluation of these conditions produced three key findings: 1. There is significant difficulty in measuring the burden of key conditions such as unintended pregnancy, unsafe abortion, nonsexually transmitted infections, infertility, and violence against women. 2. Investments in the continuum of care can have significant returns for improved and equitable access, health, poverty, and health systems. 3. There is a large difference in how RMNCH conditions affect different income groups; investments in RMNCH can lessen the disparity in terms of both health and financial risk.

**Maternity and Paternity at Work** Mar 15 2022 This report provides a picture of where we stand and what we have learned so far about maternity and paternity rights across the world. It offers a rich international comparative analysis of law and practice relating to maternity protection at work in 185 countries and territories, comprising leave, cash benefits, employment protection and non-discrimination, health protection, breastfeeding arrangements at work and childcare. Expanding on previous editions, it is based on an extensive set of new legal and statistical indicators, including coverage in law and in practice of paid maternity leave as well as statutory provision of paternity and parental leave and their evolution over the last 20 years. The report also takes account of the recent economic crisis and austerity measures. It shows how well national laws and practice conform to the ILO Maternity Protection Convention, 2000 (No. 183), its accompanying Recommendation (No. 191) and the Workers with Family Responsibilities Convention, 1981 (No. 156), and offers guidance on policy design and implementation. This report shows that a majority of countries have established legislation to protect and support maternity and paternity at work, even if those provisions do not always meet the ILO standards. One of the persistent challenges is the effective implementation of legislation, to ensure that all workers are able to benefit from these essential labour rights.

**AWHONN's High-Risk & Critical Care Obstetrics** Apr 15 2022 Develop top-level guidelines for high-risk and critically ill pregnancy women with AWHONN High-Risk & Critical Care Obstetrics, 4th Edition, an official publication of the Association of Women's Health, Obstetric & Neonatal Nurses (AWHONN). This comprehensive analysis of critical care obstetrics concepts offers summary of research findings and top-notch clinical expertise. This is the expert guidance you need to navigate complex patient conditions and promote safe, effective perinatal care.

**Management of Unintended and Abnormal Pregnancy** Apr 23 2020 Access to high quality abortion care is essential to women's health, as evidenced by the dramatic decrease in pregnancy-related morbidity and mortality since the legalization of abortion in the United States, and by high rates of maternal death and complications in those countries where abortion is still provided under unsafe conditions. The past two decades have

brought important advances in abortion care as well as increasing cross-disciplinary use of abortion technologies in women's health care. Abortion is an important option for pregnant women who have serious medical conditions or fetal abnormalities, and fetal reduction techniques are now well-integrated into infertility treatment to reduce the risks of multiple pregnancies resulting from assisted reproductive technologies. Management of Unintended and Abnormal Pregnancy: Comprehensive Abortion Care is the textbook of the National Abortion Federation, and serves as the standard, evidence-based reference text in abortion care. This state-of-the-art textbook provides a comprehensive overview of the public health implications of unsafe abortion and reviews the best surgical and medical practices for pregnancy termination, as well as managing ectopic and other abnormal pregnancies. Management of Unintended and Abnormal Pregnancy: Comprehensive Abortion Care is the leading source for a comprehensive understanding of issues related to unintended and abnormal pregnancy. This textbook: is authored by internationally-known leaders in women's health care; addresses unintended pregnancy and abortion from historical, legal, public health, clinical, and quality care perspectives; includes chapters on pregnancy loss, ectopic pregnancy, gestational trophoblastic disease, and multifetal pregnancy reduction; covers treatment of pregnancies in the first and second trimester by both medical and surgical techniques; and provides resources for clinical, scientific, and social support for the abortion provider and patient.

*Disease Control Priorities, Third Edition (Volume 1)* Dec 24 2022 Essential Surgery is part of a nine volume series for Disease Control Priorities which focuses on health interventions intended to reduce morbidity and mortality. The Essential Surgery volume focuses on four key aspects including global financial responsibility, emergency procedures, essential services organization and cost analysis.

*Fetal Heart Rate Monitoring* Jan 30 2021 "Fetal heart rate monitoring is widely used by almost every obstetrician as a way to document the case and to help decrease health care costs. This is a short reference on the physiologic benefits, instrumentation, application and interpretation of fetal heart rate monitoring. The second half of the book uses actual FHR strips and cases to illustrate various anomalies (fetal distress, fetal distress in prematurity, fetus with CNS dysfunction). Several new drugs have been introduced for use during labor that effect FHR"--Provided by publisher.

*Obstetric Care* Apr 27 2023 Gain a critical understanding of obstetrics, and a thorough knowledge base of modern management techniques, with this accessible textbook. While acting as a stand-alone text on obstetric care, this volume also forms part of a three-volume set - all authored by leading authorities - on the entirety of obstetric and gynecologic practice. Obstetric Care's topics are based on academic objectives of experts in the field. This textbook offers tailored support for new residents and experienced physicians alike. Obstetric Care is invaluable for wide-ranging yet concise reference material, and provides evidence based care recommendations for specific patient conditions. The chapters in this textbook are based on the objectives of the Committee for Resident Education in Obstetrics and Gynecology; the book offers outstanding modern management techniques across the obstetrics specialty, making it a go-to for reference and comprehensive study.

**Monitoring Emergency Obstetric Care** Aug 20 2022 This handbook describes indicators that can be used to assess, monitor and evaluate the availability, use and quality of Emergency Obstetric Care. These emergency obstetric care indicators can be used to measure progress in a programmatic continuum: from the availability of and access to emergency obstetric care to the use and quality of those services.

Obstetric Decision-Making and Simulation Jul 27 2020 Simulation is becoming an integral part of medical education and has already a well-established role within anaesthesia training, with many examination questions already modelled on simulation scenarios. The clinical diversity and

multidisciplinary nature of an obstetric team creates the ideal environment for simulation training. It enables the team to develop their knowledge of clinical emergencies whilst becoming more aware of the importance of human factors. This book is a practical guide to inspire clinical leads to establish simulation within their delivery suite. The book comprises an extensive obstetric scenario library, with each scenario broken down into learning outcomes, a list of staff and equipment needed, specific stages mapped to learning outcomes with appropriate results/investigations and a checklist of ideal actions to enable the post-scenario debrief. Written by consultant obstetric anaesthetists, this book will appeal to medical practitioners interested in facilitating obstetric simulation.

**The Hospital by the River** May 05 2021 Gynaecologists Catherine and Reg Hamlin left Australia in 1959 on a short contract to establish a midwifery school in Ethiopia. Over 40 years later, Catherine is still there, running one of the most outstanding medical programmes in the world. The Hamlins dedicated their lives to women suffering the catastrophic effects of obstructed labour. The awful injuries that such labour produces are called fistulae, and until the Hamlins began their work in Ethiopia, fistula sufferers were neglected and forgotten - a vast group of women facing a lifetime of incapacity and degradation. Catherine and Reg, with their team of dedicated fistula surgeons, have successfully operated on over 25,000 women, and the Addis Ababa Fistula Hospital, the hospital they opened in 1974, has become a major teaching institution for gynaecologists from all over Ethiopia and the developing world. Since Reg's death, Catherine and her team have continued the work.

**Dissident Doctor** May 29 2023 How often do you hear a doctor saying doctors need to be more accountable, Medicare needs more support and family medicine deserves more respect? Dissident Doctor bristles with refreshingly frank criticisms from inside the health sector, and its author is not just any doctor but a distinguished scientific researcher, veteran medical administrator, Professor Emeritus, recipient of the Order of Canada and lifelong gadfly. In Dissident Doctor, Michael C. Klein intersperses fascinating tales of individual cases with formative elements of his personal life. As the son of American left-wing activists, he grew up singing folk songs about justice and racial equality; as a young doctor his refusal to serve as a military physician during the Vietnam War prompted his immigration to Canada. His early experience working with midwives in Ethiopia—delivering babies using techniques for natural pain relief and without routine episiotomy—were formative, leading him to question many standard but unjustified procedures in Western maternity care. He made many unconventional decisions as a result of his focus on humane medicine, transitioning from a specialization in pediatrics and newborn care to become a family physician, and embracing midwifery before it was approved in Canada. Klein's determination in the face of great opposition, the strength of his convictions, and his humility and sense of humour drive this powerful story of a life and career dedicated to his patients and his principles.

**Practical Obstetrics and Gynaecology Handbook for O&G Clinicians and General Practitioners** Jun 25 2020 This handbook provides an evidence-based approach to common obstetrics & gynaecological problems faced by O & G clinicians and general practitioners in their daily practice. It is the only book available with current evidence-based recommendations and protocols in O & G. Compiled by experienced experts, this new edition contains 24 new chapters. The existing chapters have been updated using the latest evidence. The authors have included multiple flow charts and detailed practical approaches to various gynaecology and obstetric issues. The book will be a valuable and quick practical guide to everyone — not only to general practitioners and O & G clinicians, but also to medical students and resident doctors. Topics like “Approach to Ectopic Pregnancy” and “Pelvic Inflammatory Disease” will provide invaluable guidance to even emergency medicine doctors. The practising general practitioner or family physician will be able to find ready answers to the problems they face during difficult consultations in obstetrics & gynaecology. Practical Obstetrics & Gynaecology Handbook for the General Practitioner is a must-have Desk Reference Book for the busy general practitioner. I congratulate the authors for this much-needed and long-awaited book which will upgrade the practice of obstetrics and gynaecology by general practitioners." Lim Lean Huat Adjunct Associate Professor, National University of Singapore Past President, College of Family Physicians  
"This is a book of concise, up-to-date, evidence-based knowledge for the busy family physician. In the pages are the must-know information on 11 topics of obstetric care, 5 topics of investigations in obstetrics, 28 topics of gynaecological care, and 6 topics on investigations in gynaecology. Keep it by your side in the consultation room." Goh Lee Gan Associate Professor, National University of Singapore Chief Examiner, MMed (Family Medicine) (Singapore) 2005  
"Practical Obstetrics & Gynaecology Handbook for the General Practitioner is written clearly and concisely. It covers the spectrum of common conditions that are likely to present to the family practitioner and provides a simple review with key points on management of these conditions. The liberal use of tables and charts makes it very useful as a quick reference handbook in busy clinics. KK Women's and Children's Hospital continues to have the highest patient load in Obstetrics and Gynaecology in Singapore. As the national hospital for women, it is indeed

appropriate that such a practical handbook be published under its auspices. The authors are very experienced in the field and must be heartily congratulated for this laudable publication.” Ivy Ng Clinical Associate Professor, National University of Singapore Chief Executive Officer, KK Women's and Children's Hospital “I will strongly recommend this handy up-to-date book for the busy GP who will be advised on first hand practical management, referral criteria & guidelines and additional information counselling for the patient on the probable actions by OBGYN after referral. It deserves a place in any Singapore GP practice clinic desk and in my OBGYN clinic as well. I would echo strongly that it is a much needed and long awaited book for the General Practitioner.” Dr Tan Kok Hian Editor, Singapore Journal of Obstetrics and Gynaecology Associate Editor, Singapore Medical Journal “It is an excellent book that answers the everyday questions that general practitioner will ask in their clinical practice. This is a hand-book that I would thoroughly recommend to all GPs. The concise nature of the text makes it easy for busy clinicians to refer to.” Annals Academy of Medicine, Singapore “Practical Obstetrics and Gynaecology Handbook for the General Practitioner is an update and concise reference book. The authors have presented the subject material in both obstetrics and gynecology in an evidence-based fashion and used tables and diagrams to provide the practitioner with logical algorithms to basic and complex problems. The authors should be congratulated on for providing this outstanding textbook which can become a leading desk reference for the busy clinician and trainee.” Professor Haywood L Brown Chair Obstetrics and Gynaecology, Duke University Medical Center “Practical Obstetrics and Gynaecology Handbook for the General Practitioner is a landmark publication on Obstetrics and Gynaecology, which will no doubt go down in history as one of the must-have, widely-read, Singapore-published medical references.” Singapore Medical Journal, Singapore
