The Stationers' Company and the Printers of London, 1501–1557 Mar 28 2021 This major, revisionist reference work explains for the first time how the Stationers' Company acquired both a charter and a nationwide monopoly of printing. In the most detailed and comprehensive investigation of the London book trade in any period, Peter Blayney systematically documents the story from 1501, when printing first established permanent roots inside the City boundaries, until the Stationers' Company was incorporated by royal charter in 1557. Having exhaustively re-examined original sources and scoured numerous archives unexplored by others in the field, Blayney radically revises accepted beliefs about such matters as the scale of native production versus importation, privileges and patents, and the regulation of printing by the Church, Crown and City. His persistent focus on individuals – most notably the families, rivals and successors of Richard Pynson, John Rastell and Robert Redman – keeps this study firmly grounded in the vivid lives and careers of early Tudor Londoners.

Mantle Dynamics May 22 2023 Treatise on Geophysics: Mantle Dynamics, Volume 7 aims to provide both a classical and state-of-the-art introduction to the methods and science of mantle dynamics, as well as survey leading order problems (both solved and unsolved) and current understanding of how the mantle works. It is organized around two themes: (1) how is mantle convection studied; and (2) what do we understand about mantle dynamics to date. The first four chapters are thus concerned with pedagogical reviews of the physics of mantle convection; laboratory studies of the fluid dynamics of convection relevant to the mantle; theoretical analysis of mantle dynamics; and numerical analysis and methods of mantle convection. The subsequent chapters concentrate on leading issues of mantle convection itself, which include the energy budget of the mantle; the upper mantle and lithosphere in and near the spreading center (mid-ocean ridge) environment; the dynamics of subducting slabs; hot spots, melting anomalies, and mantle plumes; and finally, geochemical mantle dynamics and mixing. Self-contained volume starts with an overview of the subject then explores each topic in detail Extensive reference lists and cross references with other volumes to facilitate further research Full-color figures and tables support the text and aid in understanding Content suited for both the expert and non-expert
Report Apr 09 2022

Morse Family of Essex County, Massachusetts Oct 15 2022 After more than 20 years of research, the author was finally able to pull together more than 70,000 descendants of William Morss (b. in the 1600s) and his wife Elizabeth. By tracking the descendants of Anthony Morse of Essex County, MA she can identify more than 70,000 descendants. Many of these lines had been lost to history, including a more recent one of Joseph Willis Morse, whose son founded the precursor to the magazine "Vanity Fair" in Atlantic City. His son had '9' sons, each with large families of their own, none of whom were listed in the traditional histories. And so the search began.. Browse the names of the first 6 generations of descendants of Stephen Morse of Essex Co., MA. More will be published in the future, but books can only be so many pages. Volume 2 will include the story of Hugo Von Mors, the descendant of a noble Flanders family and a Knights Templar.

Imagined Futures in Science, Technology and Society Dec 25 2020 Imagining, forecasting and predicting the future is an inextricable and increasingly important part of the present. States, organizations and individuals almost continuously have to make decisions about future actions, financial investments or technological innovation, without much knowledge of what will exactly happen in the future. Science and technology play a crucial role in this collective attempt to make sense of the future. Technological developments such as nanotechnology, robotics or solar energy largely shape how we dream and think about the future, while economic forecasts, gene tests or climate change projections help us to make images of what may possibly occur in the future. This book provides one of the first interdisciplinary assessments of how scientific and technological imaginations matter in the formation of human, ecological and societal futures. Rooted in different disciplines such as sociology, philosophy, and science and technology studies, it explores how various actors such as scientists, companies or states imagine the future to be and act upon that imagination. Bringing together case studies from different regions around the globe, including the electrification of German car infrastructure, or genetically modified crops in India, *Imagined Futures in Science, Technology and Society* shows how science and technology create novel forms of imagination, thereby opening horizons toward alternative futures. By developing central aspects of the current debate on how scientific imagination and future-making interact, this timely volume provides a fresh look at the complex interrelationships between science, technology and society. This book will be of interest to postgraduate students interested in Science and Technology Studies, History and Philosophy of Science, Sociology, Cultural Studies, Anthropology, Political Sciences, Future Studies and Literary Sciences.

A Creative Philosophy of Anticipation Aug 21 2020 This edited collection highlights the valuable ontological and creative insights gathered from anticipation studies, which orients itself to the future in order to recreate the present. The gathered essays engage with many writers from speculative metaphysics to poetic philosophy, ancient writing systems to the fringes of pataphysics. The book situates itself as a creative intervention in and with various thinkers, designers, artists, scientists and poets to offer insight into ways of anticipating. It brings together philosophical practices for which creativity is both a fundamental area of consideration and a mode of working, a characterization of recent Continental Philosophy which takes a departure from traditional futures studies thinking. This book will be of interest to scholars and research in futures studies, anticipation, philosophy, creative practice and theories about creative practice, as well as the intersections between philosophy, creativity and business.
