[AIDS in the Workplace](#) Oct 17 2022 Health experts estimate that one million people in the United States are HIV positive, but new medical treatments allow many to work for years after contracting the AIDS virus. Drawing on the most comprehensive and up-to-date information now available on the complex legal and ethical issues related to AIDS, attorney William F. Banta explains employers', employees', and applicants' rights and responsibilities as defined by the new Americans with Disabilities Act, OSHA, COBRA, the National Labor Relations Act, state and local laws,

arbitration awards, and the Centers for Disease Control. He clarifies the complex issues of hiring, firing, insuring, and testing applicants and employees with the AIDS virus. More than any other group of employees, physicians, nurses, dentists, and other health care workers have generated concern about transmitting or acquiring HIV on the job. While the risk of actual infection is very low for medical practitioners, and even more remote for patients, health care employers should develop policies and procedures to guide them through complex and sensitive situations and limit their liability in the event of a legal challenge. They must balance the infected employee's right to work against the obligation to protect the patient. They must weigh the obligation to treat infected patients against the right of employees to safe working conditions. They must consider the right of an employee or patient to know the HIV condition of the other, as well as the infected person's right to confidentiality. William Banta cuts through the medical, legal, and ethical morass to analyze these matters with clarity. The extensive appendix of laws and regulations, government recommendations, checklists, and sample policies will assist readers in developing or evaluating their own workplace procedures. Workers who are HIV positive, managers, union officials, attorneys, and physicians, will find valuable advice on one of the most urgent problems of the 1990s.

**A New Paradigm for Informed Consent** Jun 20 2020  
Presents a new paradigm for informed consent based on autonomous, reflective, rational, substantially understood medical treatments that are substantially disclosed to the patient. The author redefines the physician-patient relationship as an equal partnership between two individuals with the common goal of improving overall health and well-being. She argues that if this view is acknowledged and practiced by the medical community, it will lesson the burdens of achieving an effective informed consent which is based on an autonomously derived decision by the patient. *Alzheimer's Dementia* Feb 09 2022 The National Institute on Aging (NIA) has historically been concerned with the protection of human subjects. In July 1977, the NIA sponsored a meeting to update and supplement guide lines for protecting those participating in Federal research projects. Although the basic guidelines had been in effect since 1966, it had been neglected to include the elderly as a vulnerable population. In November 1981, the NIA

organized a conference on the ethical and legal issues related to informed consent in senile dementia cases. The present volume offers the latest and best thinking on Alzheimer's Dementia to have emerged from the dialog that was first embarked upon at the NIA meeting. Indeed, the issues and concerns it treats now seem even more relevant than they appeared historically because of the vastly greater awareness in the community of the entire spectrum of problems Alzheimer's disease confronts us all with. Our interest and concern is both humanitarian and self serving. Clearly older people must be protected from in appropriate research and careful attention must be paid to the circumstances under which research is conducted on those older persons who have given anything less than full consent. It is equally necessary, however, for the research enterprise to be protected so that today's elderly and those of the future can benefit from the fruits of research.
