This volume deals specifically with those antituberculosis drugs which passed the preclinical phase and have been or are used in the treatment of tuberculosis and other mycobacterial diseases (except leprosy) in at least some parts of the world. Despite this restriction, there are 14 such drugs, and as a result this volume has reached rather large proportions. To prevent it from becoming even larger and more unwidely, most derivatives of antituberculoics have been omitted, especially where it is claimed that they provide only better bioavailibility or tolerability. Only in the chapter

on the chemotherapy of diseases due to so-called atypical mycobacteria is the clinical use of the drugs described to a certain extent. In addition to antituberculoitics, also discussed are antimicrobials which have been found to be effective against these mycobacteria. The sequence in which the drugs are described is historical, reflecting not the time of discovery but rather the first clinical application. This order was selected for reasons which are now no longer relevant. In this volume less emphasis is placed on detection, biological or synthetic production of antituberculoitics, and structure-activity relationships. In contrast, emphasis is put on the degree, type, and mechanism of antimyco bacterial activity, pharmacokinetics, and biotransformation in animals and man, on experimental pharmacodynamics, and on the toxicity of antituberculoitics used therapeutically. This volume collects for the first time interdisciplinary findings in ophthalmology concerning effectiveness and indications of antiseptics for the prophylaxis and therapy of infections. The first part discusses the use of various antiseptics against colonization, contamination and infection of the eye caused by viruses, bacteria, fungus and protozoa in comparison to topical antibiotics. The spectrum of action, the risk of resistance of only microbiostatic active agents and the galenic

requirements of antiseptics are included as well as the local and systemic tolerance. New data to iodophors, polyhexanide and magnesium monoperphthalate are presented, and, for the first time, microbiologic requirements of ocular antiseptics are defined. In the second part the current scientific knowledge of prophylaxis and therapeutic antisepsis is presented including Credé's prophylaxis and requirements in cornea banks. The final part is reserved for additional topics such as isolation techniques, hand hygiene, hygiene of contact lenses and microbiological diagnostics. To ophthalmologists, optometrists and opticians this book will give indispensable information on latest clinical and experimental findings in the field. It will also be essential reading to hygienists, microbiologists, infectionists, pharmacologists, pharmacists, and pediatricians interested in ophthalmologic issues. Herzinfarkt / Prophylaxe. "Collection of incunabula and early medical prints in the library of the Surgeon-general's office, U.S. Army": Ser. 3, v. 10, p. 1415-1436. Migräne und Kopfschmerzen betreffen uns alle: direkt oder indirekt, medizinisch, aber auch volkswirtschaftlich. Dieses Buch gibt Aufschluss über die verschiedenen Arten von Kopfschmerzen und deren Behandlung. Es bietet ein breites Spektrum an Themen - von der Diagnose und der

Behandlung bis zur philosophischen Beleuchtung und geschichtlichen Aufarbeitung der Kopfschmerzen - sowie Spezialthemen wie Frau und Migräne und Kopfschmerzen bei Kindern. Zudem führt es durch das breit gefächerte, multimodale Therapiespektrum der Schul- und Komplementärmedizin und bietet Hilfe in Notfallsituationen. Ebenso dient es als Orientierungs- und Interpretationshilfe im Informationsdschungel des Internets sowie der Wissensvertiefung. Behilflich dabei sind Abbildungen und wissenschaftliche Zeichnungen, die entwickelt wurden, um die komplexen Zusammenhänge besser verstehen zu können. Migräne & Kopfschmerzen ist ein, im deutschsprachigen Raum, einmaliges Nachschlagewerk, welches umfassend, kompetent und leicht verständlich durch die Thematik führt und mit detailreichen Illustrationen besticht. "Collection of incunabula and early medical prints in the library of the Surgeon-general's office, U.S. Army": Ser. 3, v. 10, p. 1415-1436.
