The lab activities in this book will let you explore almost everything about energy—what it is, how we find it, how we use it, and how we can save it. Uniting this collection of science experiments for the kitchen, backyard, or classroom is the goal to explore and discover real energy solutions. The chapters cross all categories—from steam, electricity, and chemical reactions, to water, solar, and wind power—allowing kids to compare and test the different sources and to discover their strengths and failings. Why is one source of energy is more efficient for a one situation but not for another? Why might two energy sources combined work better than a single source? Which sources are renewable? Projects are geared to understanding actual issues in the news today. With an emphasis on inventive exploration, you'll discover that creativity leads to breakthroughs. Learn about: chemical, radiant, and thermal energy by activating a glow stick and watching it get brighter in hot water. viscosity by sucking soda and chocolate syrup up an "oil pipeline" made from straws. solar energy by melting s'mores in a pizza box solar oven. wind power by lifting paperclips with a wind turbine made from a cup, paper, tape, and straw. calories by burning cheese puffs (and other food) in a homemade calorimeter.
