The Economics of Gambling Jun 11 2022 Against a background of extraordinary growth in the popularity of betting and gaming across many countries of the world, there has never been a greater need for a study into gambling's most important factor - its economics. This collection of original contributions drawn from such leading experts as David Peel, Stephen Creigh-Tyte, Raymond Sauer and Donald Siegel covers such interesting themes as: *betting on the horses *over-under betting in football games *national lotteries and lottery fatigue *demand for gambling *economic impact of casino gambling This timely and comprehensive book covers all the bases of the economics of gambling and is a valuable and important contribution to the ongoing and growing debates. The Economics of Gambling will be of use to academics and students of applied, industrial and mathematical economics as well as of being vital reading for those involved and interested in the gambling industry.

Ascetica Feb 19 2023 Papers presented at the Eleventh International Conference on Patristic Studies held in Oxford 1991

(see also *Studia Patristica* 24, 26, 27 and 28). The successive sets of *Studia Patristica* contain papers delivered at the International Conferences on Patristic Studies, which meet for a week once every four years in Oxford; they are held under the aegis of the Theology Faculty of the University. Members of these conferences come from all over the world and most offer papers. These range over the whole field, both East and West, from the second century to a section on the *Nachleben* of the Fathers. The majority are short papers dealing with some small and manageable point; they raise and sometimes resolve questions about the authenticity of documents, dates of events, and such like, and some unveil new texts. The smaller number of longer papers put such matters into context and indicate wider trends. The whole reflects the state of Patristic scholarship and demonstrates the vigour and popularity of the subject.

The Septuagint and Messianism Mar 08 2022 The question of the extent to which the Septuagint reflects an evolution in messianic belief in comparison with the Masoretic Text has come into prominence in recent years, and in view of the role played by messianism in Jewish belief of the late Second Temple period and in early Christianity it seemed very appropriate that "The Septuagint and Messianism" should be chosen as the theme of the 2004 Colloquium Biblicum Lovaniense. This volume contains the papers given at the Colloquium, which are concerned both with methodological issues and with the interpretation of specific texts (in practice the majority of the texts in the Septuagint for which a messianic interpretation has been claimed). The papers are very far from all reflecting the same approach, and it has frequently happened that the same texts have been treated by different contributors from very different viewpoints. But the fact such different viewpoints are expressed is a proper reflection of the

complexity of the issues involved in the question of the extent of messianic belief in the Septuagint, and of the fact that the question requires a nuanced answer. It is in any case hoped that the varied approaches reflected in the papers will serve to make clear the underlying reasons for the differences between those who take a "minimalist" and those who take a "maximalist" view on the subject of the Septuagint and Messianism.

Optical Processing and Computing May 18 2020

Optical Processing and Computing is a collection of research from the USA, Canada, Russia, and Poland on the developments in the fields of digital optical computing and analog optical processing. This book is organized into 15 chapters and begins with an overview of the hierarchy of interconnect problems. Some chapters deal with the fundamental limitations and capabilities of optics in relation to interconnections, switching, computing, materials, and devices. Other chapters explore the architectures, technology, and applications of the field. The topics range from promising areas in the early stages of development, such as nonlinear effects in fibers that could bring about the optical transistor, to developments in areas ready for technology, such as the production of optical kinoforms, an important type of computer-generated optical component. With a strong focus on the fundamental aspects of the field, this book is of interest to specialists, researchers, and students who need a broad coverage of the principles of optical computing and of the underlying physics.

25 2020 This three-volume proceedings contains revised selected papers from the Second International Conference on Artificial Intelligence and Computational Intelligence, AICI 2011, held in Taiyuan, China, in September 2011. The total of 265 high-quality papers presented were carefully reviewed and selected from 1073 submissions. The topics of Part II covered are: heuristic searching methods; immune computation; information security; information theory; intelligent control; intelligent image processing; intelligent information fusion; intelligent information retrieval; intelligent signal processing; knowledge representation; and machine learning.

Pseudo-Gregory of Nyssa Jul 20 2020 Albl (religious studies, Presentation College, South Dakota) translates and comments extensively on the Greek text almost certainly written after 400 AD, shortly after Gregory died. He explains that it is part of a genre used by both Christians and Jews to argue a case by referring to scripture, and a subgenre seeking to define Christian identity a

Adverse Genres in Fernando Pessoa Apr 16 2020 Poet, short-story writer, feverish inventor--Fernando Pessoa was one of the most innovative figures shaping European modernism. Known for a repertoire of works penned by multiple invented authors--which he termed heteronyms--the Portuguese writer gleefully subverted the notion of what it means to be an author. *Adverse Genres in Fernando Pessoa* offers an introduction to the fiction and the "profusion of selves" that populates the enigmatic author's uniquely imagined oeuvre. To guide readers through the eclectic work fashioned by Pessoa's heteronyms, K. David Jackson advances the idea of "adverse genres" revealing genre clashes to be fundamental to the author's paradoxical and contradictory corpus. Through the invented "coterie of authors," Pessoa inverted the usual relationships between form and content, authorship and text. In an inspired, paradoxical, and at times absurd mixing of cultural referents, Pessoa selected genres from the European tradition (Ricardo Reis's Horatian odes, Álvaro de Campos's worship of Walt Whitman, Alberto Caeiro's pastoral and metaphysical verse, and Bernardo Soares's philosophical diary), into which he inserted incongruent contemporary ideas. By creating multiple layers of authorial anomaly Pessoa breathes the vitality of modernism into traditional historical genres, extending their expressive range. Through examinations of "A Very Original Dinner," the "Cancioneiro," love letters to Ophelia Queirós, "The Adventure of the Anarchist Banker," Pessoa's collection of quatrains derived from Portuguese popular verse, the Book of Disquietude, and the major poetic heteronyms, Jackson enters the orbit of the artist who exchanged a normal life for a world of the imagination.
