A trustworthy repository provides assurance in the form of management documents, event logs, and audit trails that digital objects are being managed correctly. The assurance includes plans for the sustainability of the repository, the accession of digital records, the management of technology evolution, and the mitigation of the risk of data loss. A detailed assessment is provided by the ISO-16363:2012 standard, "Space data and information transfer systems—Audit and certification of trustworthy digital repositories." This book examines whether the ISO specification for trustworthiness can be enforced by computer actionable policies. An implementation of the policies is provided and the policies are sorted into categories for procedures to manage externally generated documents, specify repository parameters, specify preservation metadata attributes, specify audit mechanisms for all preservation actions, specify control of preservation operations, and control preservation properties as technology evolves. An application of the resulting procedures is made to enforce trustworthiness within National Science Foundation data management plans. This book constitutes the refereed proceedings of the 6th International Conference on Mathematical Methods, Models, and Architectures for Computer Network Security, MMM-ACNS 2012, held in St. Petersburg, Russia in October 2012. The 14 revised full papers and 8 revised short presentations were carefully reviewed and selected from a total of 44 submissions. The papers are organized in topical sections on applied cryptography and security protocols, access control and information protection, security policies, security event and information management, intrusion prevention, detection and response, anti-malware techniques, security modeling and cloud security. The Database and Expert Systems Applications (DEXA) conferences have established themselves as a platform for bringing together researchers and practitioners from various backgrounds and all

regions of the world to exchange ideas, experiences and opinions in a friendly and stimulating environment. The papers presented at the conference represent recent developments in the field and important steps towards shaping the future of applied computer science and information systems. DEXA covers a broad field: all aspects of databases, knowledge based systems, knowledge management, web-based systems, information systems, related technologies and their applications. Once again there were a good number of submissions: out of 183 papers that were submitted, the program committee selected 92 to be presented. In the first year of this new millennium DEXA has come back to the United Kingdom, following events in Vienna, Berlin, Valencia, Prague, Athens, London, Zurich, Toulouse, Vienna and Florence. The past decade has seen several revolutionary developments, one of which was the explosion of Internet-related applications in the areas covered by DEXA, developments in which DEXA has played a role and in which DEXA will continue to play a role in its second decade, starting with this conference. *Wearable and Implantable Medical Devices: Applications and Challenges, Fourth Edition* highlights the new aspects of wearable and implanted sensors technology in the healthcare sector and monitoring systems. The book's contributions include several interdisciplinary domains, such as wearable sensors, implanted sensors devices, Internet-of-Things (IoT), security, real-time medical healthcare monitoring, WBSN design and data management, encryption, and decision-support systems. Contributions emphasize several topics, including real-world applications and the design and implementation of wearable devices. This book demonstrates that this new field has a brilliant future in applied healthcare research and in healthcare monitoring systems. Includes comprehensive information on wearable and implanted device technology, wearable and implanted sensors design, WBSN requirements, WBSN in monitoring systems and security concepts Highlights machine learning and computing in healthcare monitoring systems based on WBSN Includes a multidisciplinary approach to different healthcare applications and their associated challenges based on wearable and implanted technologies This volume constitutes the refereed proceedings of the International Conferences, FGCN and DCA 2012, held as part of the Future Generation Information Technology Conference, FGIT 2012, Kangwondo, Korea, in December 2012. The papers presented were carefully reviewed and selected from numerous submissions

and focus on the various aspects of grid and distributed computing, industrial environment, safety and health, and computer graphics, animation and game. Includes reports of the heads of the various municipal departments. Using Games and Simulations for Teaching and Assessment: Key Issues comprises a multidisciplinary investigation into the issues that arise when using games and simulations for educational purposes. Using both theoretical and empirical analyses, this collection examines cognitive, motivational, and psychometric issues with a focus on STEM content. Unlike other research-based volumes that focus solely on game design or the theoretical basis behind gaming, this book unites previously disparate communities of researchers—from civilian to military contexts as well as multiple disciplines—to critically explore current problems and illustrate how instructionally effective games and simulations should be planned and evaluated. While computer-based simulations and games have the potential to improve the quality of education and training, Using Games and Simulations for Teaching and Assessment: Key Issues shows how the science of learning should underlie the use of such technologies. Through a wide-ranging yet detailed examination, chapter authors provide suggestions for designing and developing games, simulations, and intelligent tutoring systems that are scientifically-based, outcomes-driven, and cost-conscious. Combining the expertise of two world-renowned RAC experts, Oracle9i RAC is the first-of-its-kind reference for RAC and TAF technology. Contains the annual reports of various Ohio state governmental offices, including the Attorney General, Governor, Secretary of State, etc. Four men of markedly different worldviews embark on a sailing adventure. Three are close friends, one of whom has received the luxurious boat from a distant, deceased relative. The fourth is a recent and mysterious acquaintance named Paul. The voyage turns disastrous as their ship is first battered by enormous waves, and later stranded in the deadly calm of windless waters. Faced with the horror of isolation on the open ocean, the four men struggle desperately to survive against the elements. As the ordeal takes its terrible toll, however, each man faces the realization that they have but precious moments left to live. In order to save themselves and return to their families, the men must each open their eyes to God. They must transcend the boundaries of human speech and discover the language of heaven, the language of God Himself. This unflinching exploration of

human faith and divine connection emphasizes that in the end, it is love that is the language of heaven. Only through this realization will each man find the strength to acknowledge a personal relationship with the divine and return to his home. Despite its small size, Belize is one of the most ecologically diverse nations in Central America. Over 3,400 species of plants can be found here, within six different ecological life zones. Because of this, Belize is paradise for ecotourists, hosting over 300,000 visitors annually, who enjoy the natural habitat and friendly people of this nation. Many of the plants of Belize have a long history of being "useful," with properties that have served traditional herbal healers of the region as well as modern medicinal applications. With *Messages from the Gods: A Guide to the Useful Plants of Belize*, Drs. Michael Balick and Rosita Arvigo give us the definitive resource on the many species of plants in Belize and their folklore, as well as the natural history of the region and a detailed discussion of "bush" uses of plants, including for traditional healing. Both Balick and Arvigo bring important perspectives to the project, Balick as ethnobotanical scientist from The New York Botanical Garden, and Arvigo as a former apprentice to a Belizean healer and an experienced physician. The book has been decades in the making, a culmination of a biodiversity research project that The New York Botanical Garden has had in motion since 1987. Drs. Balick, Arvigo and their colleagues have collected and identified thousands of plants from the region, and have worked extensively with hundreds of Belizean people, many of them herbal healers and bushmasters, to record uses for many of the species. This collaboration with local plant experts has produced a fascinating discussion of the intersection of herbal medicine and religion in the area, and these interviews are used to compliment and contextualize the numerous species accounts presented. The book is both a cultural study and a specialized field guide; information is provided on plants used as food, medicine, fiber, in spiritual practices and for many other purposes. Richly illustrated with over 600 images and photographs, *Messages from the Gods: A Guide to The Useful*

Plants of Belize will serve as the primary reference and guide to the ethnobotany of Belize for many years to come. This book constitutes the refereed proceedings of the 4th International Conference on Principles of Security and Trust, POST 2015, held as part of the European Joint Conferences on Theory and Practice of Software, ETAPS 2015, in London, UK, in April 2015. The 17 regular papers presented in this volume were carefully reviewed and selected from 57 submissions. In addition, one invited talk is included. The papers have been organized in topical sections on information flow and security types, risk assessment and security policies, protocols, hardware and physical security and privacy and voting. This book is an in-depth, systematic and structured technical reference on 3GPP's LTE-Advanced (Releases 10 and 11), covering theory, technology and implementation, written by an author who has been involved in the inception and development of these technologies for over 20 years. The book not only describes the operation of individual components, but also shows how they fit into the overall system and operate from a systems perspective. Uniquely, this book gives in-depth information on upper protocol layers, implementation and deployment issues, and services, making it suitable for engineers who are implementing the technology into future products and services. Reflecting the author's 25 plus years of experience in signal processing and communication system design, this book is ideal for professional engineers, researchers, and graduate students working in cellular communication systems, radio air-interface technologies, cellular communications protocols, advanced radio access technologies for beyond 4G systems, and broadband cellular standards. An end-to-end description of LTE/LTE-Advanced technologies using a top-down systems approach, providing an in-depth understanding of how the overall system works Detailed algorithmic descriptions of the individual components' operation and inter-connection Strong emphasis on implementation and deployment scenarios, making this a very practical book An in-depth coverage of theoretical and practical aspects of LTE Releases 10 and 11 Clear and concise descriptions of the underlying principles and theoretical concepts to provide a better understanding of the operation of the system's components Covers all essential system functionalities, features, and their inter-connections based on a clear protocol structure, including detailed signal flow graphs and block diagrams Includes methodologies and results

distributed database solutions. -- Every endeavour is covered by
some fault, just as fire is covered by smoke. Therefore one
should not give up the work born of his nature, even if such
work is full of fault. – The Bhagvad-Gita (18.48) This book is
the outcome of the research and development contributions of
partners from three different continents, Asia, Europe, America,
coming from universities, research centers, industrial partners
and SMEs (Small and Medium Enterprise), all of them
collaborating in MAGNET (My Adaptive Personal Global Net) and
MAGNET Beyond project supported by European Commission within
the Sixth Framework Programme (FP6). The project was focusing on
a secure user-centric approach developing secure Personal
Networks in multi-network, multi-device, and multi-user
environments. The innovative concept of Personal Network (PN),
which was introduced and developed in MAGNET, finds in this book
the first confirmation of the success that the future of wireless
communications is bound to achieve. The importance of this book
is not only related to being the first work on PNs, it also gives
an overview of operation of a big project, like MAGNET, and in
fact the organisation of the book reflects how then project
itself has been structured. In this incisive and practical book,
H. Richard Milner IV provides educators with a crucial
understanding of how to teach students of color who live in
poverty. Milner looks carefully at the circumstances of these
students' lives and describes how those circumstances profoundly
affect their experiences within schools and classrooms. In a
series of detailed chapters, Milner proposes effective
practices—at district and school levels, and in individual
classrooms—for school leaders and teachers who are committed to
creating the best educational opportunities for these students.
Building on established literature, new research, and a number
of revelatory case studies, Milner casts essential light on the
experiences of students and their families living in poverty,

while pointing to educational strategies that are shaped with these students' unique circumstances in mind. Milner's astute and nuanced account will fundamentally change how school leaders and teachers think about race and poverty—and how they can best serve these students in their schools and classrooms. Vehicular networks were first developed to ensure safe driving and to extend the Internet to the road. However, we can now see that the ability of vehicles to engage in cyber-activity may result in tracking and privacy violations through the interception of messages, which are frequently exchanged on road. This book serves as a guide for students, developers and researchers who are interested in vehicular networks and the associated security and privacy issues. It facilitates the understanding of the technologies used and their various types, highlighting the importance of privacy and security issues and the direct impact they have on the safety of their users. It also explains various solutions and proposals to protect location and identity privacy, including two anonymous authentication methods that preserve identity privacy and a total of five schemes that preserve location privacy in the vehicular ad hoc networks and the cloud-enabled internet of vehicles, respectively. This extensively updated second edition of LTE Signaling, Troubleshooting and Performance Measurement describes the LTE signaling protocols and procedures for the third generation of mobile communications and beyond. It is one of the few books available that explain the LTE signaling messages, procedures and measurements down to the bit & byte level, and all trace examples are taken for a real lab and field trial traces. This book covers the crucial key performance indicators (KPI) to be measured during field trials and deployment phase of new LTE networks. It describes how statistic values can be aggregated and evaluated, and how the network can be optimized during the first stages of deployment, using dedicated examples to enhance understanding. Written by experts in the field of mobile communications, this book systematically describes the most recent LTE signaling procedures, explaining how to identify and troubleshoot abnormal network behavior and common failure causes, as well as describing the normal signaling procedures. This is a unique feature of the book, allowing readers to understand the root cause analysis of problems related to signaling procedures. This book will be especially useful for network operators and equipment manufacturers; engineers;

technicians; network planners; developers; researchers; designers; testing personnel and project managers; consulting and training companies; standardization bodies. Topics covered include: parallel and distributed computing, software architecture and hardware for distributed computer control, real-time operating systems, real-time communication architectures. In multimedia and communication environments all documents must be protected against attacks. The movie Forrest Gump showed how multimedia documents can be manipulated. The required security can be achieved by a number of different security measures. This book provides an overview of the current research in Multimedia and Communication Security. A broad variety of subjects are addressed including: network security; attacks; cryptographic techniques; healthcare and telemedicine; security infrastructures; payment systems; access control; models and policies; auditing and firewalls. This volume contains the selected proceedings of the joint conference on Communications and Multimedia Security; organized by the International Federation for Information processing and supported by the Austrian Computer Society, Gesellschaft fuer Informatik e.V. and TeleTrust Deutschland e.V. The conference took place in Essen, Germany, in September 1996 Appendices to the various volumes bound separately. This book constitutes the refereed proceedings of the 6th International Workshop Radio Frequency Identification: Security and Privacy Issues. RFIDSec 2010, held in Istanbul, Turkey, in June 2010. The 17 revised full papers presented together with 3 invited talks were carefully reviewed and selected from 47 submissions. The papers focus on approaches to solve security and data-protection issues in advanced contactless technologies like RFID. Topics addressed are new applications for secure RFID systems, data protection and privacy-enhancing techniques for RFID, cryptographic protocols for RFID, integration of secure RFID systems, resource-efficient implementation of cryptography, attacks on RFID systems, and RFID security hardware. The explosive demand for mobile communications is driving the development of wireless technology at an unprecedented pace. Unfortunately, this exceptional growth is also giving rise to a myriad of security issues at all levels- from subscriber to network operator to service provider.
