Contact Lens Practice E-Book Jun 01 2021 Thoroughly revised and updated, this popular book provides a comprehensive yet easy to read guide to modern contact lens practice. Beautifully re-designed in a clean, contemporary layout, this second edition presents relevant and up-to-date information in a systematic manner, with a logical flow of subject matter from front to back. This book wonderfully captures the 'middle ground' in the contact lens field ... somewhere between a dense research-based tome and a basic fitting guide. As such, it is ideally suited for both students and general eye care practitioners who require a practical, accessible and uncluttered account of the contact lens field. Outlines a rational clinical approach to modern contact lens fitting - practical advice for the clinic and the classroom Logical structure and systematic layout, with relevant chapters grouped into coherent sections for easy reference Up-to-date for accurate information Chapters are contextualised through cross-referencing - helping to reflect the relative importance of different topics Provides an 'historical time line' of contact lens development and explains the current global situation Explains how contact lenses are fabricated, designed, manufactured and measured Reviews the scientific principles that underpin the clinical application of contact lenses New chapter on daily disposable contact lenses. Contributing authors comprising optometrists, ophthalmologists, dispensing opticians, industry experts, researchers and clinicians - all of whom are true international leaders in their sub-specialty areas. Many new line diagrams and clinical photographs to illustrate, inform and explain the concepts outlined in the text. Special consideration is given to the most popular lens replacement systems - daily, two-weekly and monthly. Extensive appendices to assist chair-side decision making in everyday practice. Efron Grading Scales for Contact Lens Complications. Evidence-based approach with numerous up-to-date references at the end of each chapter.

Optometric Practice Management Nov 06 2021 While the business aspect of an optometrist's practice may come second to patient care, optometrists today are faced with greater competition for new patients and income. This updated guide shows readers how to work smarter through effective practice management to offset reduced earnings due to fixed reimbursements of managed care and competition from 1-800 contact lens companies and chains selling discount frames and lenses. Drawing on over 40 years of experience, the author presents practical strategies for addressing the problems of day-to-day practice, and explains how to develop business and marketing plans without detracting from the optometrist's professional image. This edition features an increased focus on how to work with partners (including how to exit gracefully from a partnership), how to start a part-time practice, and how to be creative in practice. Authored by an expert in the field of practice management and optometry for the most effective, realistic advice and guidance. Concise, readable text synthesizes the author's 40-plus years of expertise in optometric practice. Necessary business and marketing skills are presented in a way that is compatible the optometrist's professional image. Tips and tools are provided on how to approach the client as both a consumer and a patient. Helpful information for students or optometrists who own or are planning to own their own practice. Completely re-written and updated. 4 new chapters cover topics such as practice locations, part-time practicing, managed care, management of un-met vision needs, and the office of the future. An increased focus on how to work with partners, including how to exit gracefully from a partnership. A discussion of how to start a part-time practice addresses real-world considerations and practical strategies. Hot new topics such as co-management of patients, gender and ethnicity, senior patient concerns, and discounting.

Making Eye Health a Population Health Imperative Nov 18 2022 The ability to see deeply affects how human beings perceive and interpret the world around them. For most people, eyesight is part of everyday communication, social activities, educational and professional pursuits, the care of others, and the maintenance of personal health, independence, and mobility. Functioning eyes and vision system can reduce an adult's risk of chronic health conditions, death, falls and injuries, social isolation, depression, and other psychological problems. In children, properly maintained eye and vision health contributes to a child's social development, academic achievement, and better health across the lifespan. The public generally recognizes its reliance on sight and fears its loss, but emphasis on eye and vision health, in general, has not been integrated into daily life to the same extent as other health promotion activities, such as teeth brushing; hand washing; physical and mental exercise; and various injury prevention behaviors. A larger population health approach is needed to engage a wide range of stakeholders in coordinated efforts that can sustain the scope of behavior change. The shaping of socioeconomic environments can eventually lead to new social norms that promote eye and vision health. Making Eye Health a Population Health Imperative: Vision for Tomorrow proposes a new

population-centered framework to guide action and coordination among various, and sometimes competing, stakeholders in pursuit of improved eye and vision health and health equity in the United States. Building on the momentum of previous public health efforts, this report also introduces a model for action that highlights different levels of prevention activities across a range of stakeholders and provides specific examples of how population health strategies can be translated into cohesive areas for action at federal, state, and local levels.

A Minimum Space Guideline for U.S. Air Force Optometry Services Feb 21 2023 The purposes of this study were (1) to review and analyze present guidelines concerning Air Force optometric workspace allocation, and (2) to develop a proposal for new guidelines based on accepted standards found in the literature. A review of the literature concerning optometric clinical design is presented. The information gathered from the review is analyzed to determine the minimum space required for one optometrist and one technician to efficiently deliver full scope optometric care. The existing Air Force space allocation guidelines are critiqued by comparing them to these newly derived minimum space requirements. It is determined that an optometric service should contain at least 6 discrete areas covering a minimum 654 sq. ft. The current guidelines call for only 4 different areas covering 440 sq. ft. The newly derived space requirements are proposed as more cost-effective alternatives for guidelines and are used in the derivation of a model floorplan. It is concluded that an updating of current optometric space allocation guidelines, to include

more space for additional services, would be conducive to more efficient delivery of Air Force vision care.
