Corruption and Racketeering in the New York City Construction Industry Jan 18 2023 This book, *Corruption and Racketeering In The New York City Construction Industry: The Final Report of the New York State Organized Task Force*, lays out in close and compelling detail the intricate patterns of corrupt activities and relationships that for the better part of a century have characterized business as usual in the construction industry in America's largest metropolis. The book is the end product of more than five years' worth of investigation, prosecutions, and research by the New York State Organized Crime Task Force, a unique agency that has set a national example for marrying law enforcement initiatives with comprehensive and exhausting analysis of the causes and dynamics of industrial racketeering. This is a sobering analysis of the

construction industry, one of New York City's largest industries, and in effect, one of the city's most significant economic sectors. In any given year during the 1980s, billions of dollars of construction were being carried out at any one time. The industry regularly employs more than 100,000 people in the city, involving some one hundred union locals and many hundreds of general and specialty contractors as well as a large number of architects, engineers, and materials suppliers. The book shows—in great and provocative detail—how organized extortion, bribery, illegal cartels, and bid rigging characterize construction in the city. The basis for much of this crime is labor racketeering, controlled or orchestrated by organized crime. It reveals how this world of corruption affects not only the private sector but the city's vast public works program, and it spells out the ways in which both organized crime and official corruption each sustain the dynamics of ongoing criminality. Wrong-doing on a massive scale is documented at length. But this book is more than a recitation of extensive and systematic criminality. The book recommends a number of plausible options for genuine reform. Necessarily these are profound and radical solutions, but everyone who reads this book will conclude that only profound and radical solutions could hope to solve such an entrenched and intractable crime problem.

History Education and the Construction of National Identities May 30 2021 How is history represented? As just a record of the past, as a part of a present identity or as future goals? This book explores how historical contents and narratives are presented in school textbooks and other cultural productions (museums, monuments, etc) and also how they are understood by students, in the context of increasing globalization. In these contemporary conditions, the relation between history learning processes, in and out of school, and the construction of national identities presents an ever more important topic. It is being studied by looking at the appropriation of historical narratives, which are frequently based on the official history of a nation state. Most of the chapters in this volume are educational studies about how the learning of history takes place in school settings of different countries such as Canada, France, Germany, Latin America, Spain,

the Netherlands, the United Kingdom and the United States. Covering such a broad sample of cultural and national contexts, they provide a rich reflection on history as a subject related to patriotism, cosmopolitanism, both or neither.

Applying the Building Code Feb 07 2022 No other resource—not even the building code—presents the exact code information you need, when you need it at design stage The International Building Code (IBC) is a model building code developed by the International Code Council (ICC). The IBC and its complementary codes provide design and construction professionals with a complete set of comprehensive, coordinated building safety and fire prevention regulations in order to safeguard the public health and general welfare of the occupants of new and existing buildings and structures. Adopted throughout most of the United States and its territories, it is referenced by federal agencies, such as the General Services Administration, National Park Service, Department of State, U.S. Forest Service, and the Department of Defense. For architects and other design and construction professionals, it is particularly important that they understand how to apply the IBC and how code officials view buildings, so that they integrate code-required provisions in the earliest design stages of any project. Applying the IBC, as well as its companion codes, to building design is a process that is uniquely different to that of applying the building code during a planning review. Whereas other guide books explain the IBC in sequential order, from cover to cover, chapter by chapter, and section by section, *Applying the Building Code* explains the requirements of the IBC as they would apply during the common phases of design: from schematic design through to the preparation of construction documents. This effectively highlights applicable requirements of the building code at the appropriate stage of design based on available information. The book provides a 28-step process that is organized according to the three phases of architectural design: schematic design, design development, and construction documents Each step explains the application of the IBC, as well as other codes and standards referenced by the IBC (i.e. International Fire Code, International Energy Conservation Code, and ANSI A117.1) based on available project information Illustrations and examples are provided throughout that explain the code fundamentals associated with each step A single example project is used throughout the step-by-step process to illustrate how each step is applied and builds upon code and project information obtained through previous steps Guidance is also provided on the International Existing Building Code and how the step-by-step process is applied to projects involving existing buildings The role of the building department and its staff in regard to plan reviews and code enforcement is discussed A detailed code data information template is provided that can help organize code-related information for construction documents

Construction Regulations Handbook May 10 2022 Outlines and discusses the processes used by the design/construction professional and the building/municipal code official in bringing a project to the occupancy stage. Using codes (without being code specific) as a common document, the book shows how and why there may be serious problems of lack of understanding between the parties involved. It shows how to avoid these problems by allowing the reader to see him/herself as part of the larger regulatory system and by facilitating a greater understanding of that system. Guides the reader in seeking more information (specific to his/her area of work), better procedures, and more detail of this system as a whole. Useful to both sets of professionals since there is no formal exposure to codes.
