***The purpose of this nurse shift report journal is to keep all your
various patient reports all organized in one easy to find spot. The
delivery of high quality and equitable care for both mothers and
newborns is complex and requires efforts across many sectors. The
United States spends more on childbirth than any other country in the***

world, yet outcomes are worse than other high-resource countries, and even worse for Black and Native American women. There are a variety of factors that influence childbirth, including social determinants such as income, educational levels, access to care, financing, transportation, structural racism and geographic variability in birth settings. It is important to reevaluate the United States' approach to maternal and newborn care through the lens of these factors across multiple disciplines. Birth Settings in America: Outcomes, Quality, Access, and Choice reviews and evaluates maternal and newborn care in the United States, the epidemiology of social and clinical risks in pregnancy and childbirth, birth settings research, and access to and choice of birth settings. Nursing is an evolving profession that requires continued knowledge updates in formulating a foundation for practice. In order to promote patient safety and satisfaction, it is imperative that nurses monitor publications and increase their knowledge base. Each patient is different; each care management situation requires an individualized plan of care. These require the nurse to develop a personal framework for practice that continually develops from this information. This mandates an evolving knowledge base which this edition will supply for nurses who work to deliver care that is research based and protocol driven. This issue of Nursing Clinics will be both timely and relevant as it will combine two clearly important topics for nurses in care management, pathophysiological updates as well as research based protocols that are important to continuity of validated evidence based care delivery. This will give nurses across organizations the opportunity to see care from a perspective of patient wholeness and not truncate care in order to address total components. With care reimbursement dependent on outcomes, it is important for the nurse to see care as a continuum and not finite. This issue will give nurses this perspective. Throughout this book, you will find hundreds of mnemonics, many of which have been used for years by health care professionals to help them recall vital information. Once you see how the mnemonics work, you can pick and choose the ones that work for you, or you can even use the information in this book to create your own mnemonics that are easy for you to remember. Mnemonics can also come in handy on the NCLEX. Here is a question that is typical for this exam: A patient comes to the clinic complaining of severe gastrointestinal distress. Which abdominal physical assessment step does the nurse do first? a. Inspection b. Palpation c. Percussion d. Auscultation. If you remember your mnemonic tricks, then this question will be easy. Remember the mnemonic "I Am a People Person," and you will instantly know that the answer is "A, inspection." -I = Inspection-A = Auscultation-P = Percussion-P = Palpation. Please don't wait until you are studying for exams, pick up this book, and use it throughout your studies so that the mnemonics used will become second nature to you and propel you towards your nursing career.
