Every day millions of children in developing countries face adversities of many kinds, yet there is a shortage of sound evidence concerning their plight and an urgent need to identify the most appropriate and effective policy responses from among the multiple approaches that exist. This collection of journal papers aims to engage with researchers and debates in the field so as to understand better some of the numerous risks confronted by children in developing countries. It highlights the complexity of protecting children in various forms of adversity, challenges conventional wisdom about what protects children, demonstrates why it is essential to consult with children to protect them successfully, and suggests that successful protection must be based on strong empirical understanding of the situation and the perspectives of children and communities involved. The contributors are all experienced researchers and practitioners who have worked for many years with children in developing countries. The book offers suggestions for reform of current child protection policies, based on empirical findings around a range of child protection concerns, including children's work, independent migration, family separation, early marriage, and military occupation. Together, the contributions provide a body of knowledge important to humanitarian and development policy and practice. This book was published as a special issue of *Development in Practice*.

*Child Maltreatment, Third Edition*, by Cindy Miller-Perrin and Robin Perrin, is a thoroughly updated new edition of the first textbook for undergraduate students and beginning graduate students in this field. The text is designed to provide a comprehensive introduction to child maltreatment by disseminating current knowledge about the various types of violence against children. By helping students understand more fully the etiology, prevalence, treatment, policy issues, and prevention of child maltreatment, the authors hope to further our understanding of how to treat child maltreatment victims and how to prevent future child maltreatment. Practical rules and strategies designed to protect electronic systems from damage by transient overvoltages include symptoms and threats, remedies, protective devices and their applications, and validation of protective measures. 1989 edition. The literature on cytokine genetics is vast, so vast that it is now practically beyond the time or logistical constraints of most scientists to successfully keep pace with it. A compilation of the latest research, *Cytokine Gene Polymorphisms in Multifactorial Conditions* brings together, reviews, and structures up-to-date information on polymorphisms in cytokine genes. It discusses haplotype structures and linkage disequilibrium patterns in cytokine gene loci; functional biological effects of polymorphisms; and genetic associations with disease. The book documents polymorphisms in the most important cytokine genes, or gene clusters, and their biological and genetic effects in a multitude of distinct multifactorial conditions. Unique to this book are the "disease-centered" chapters examining the role of cytokine gene polymorphisms in a multitude of multifactorial conditions. The conditions include autoimmune or chronic inflammatory diseases, cardiovascular disease, infectious diseases, and longevity. "This section is a real tour de force" (Grant Gallagher and Michael F. Seldin, March 2006). Broadening the understanding of the effect of genetic variations on human immune responses, the organization, scope, and content of this book make it a valuable and easily accessible resource. The book integrates genetic, immunological, and clinical information and will serve as a reference for novice and expert geneticists, immunologists, cell biologists and clinicians. It is a must for everyone involved in, or planning, cytokine genetics or immunogenetics studies.

The understanding of how to reduce risk factors for mental disorders has expanded remarkably as a result of recent scientific advances. This study, mandated by Congress, reviews those advances in the context of current research and provides a targeted definition of prevention and a conceptual framework that emphasizes risk reduction. Highlighting opportunities for and barriers to interventions, the book draws on successful models for the prevention of cardiovascular disease, injuries, and smoking. In addition, it reviews the risk factors associated with Alzheimer's disease, schizophrenia, alcohol abuse and dependence, depressive disorders, and conduct disorders and evaluates current illustrative prevention programs. The models and examination provide a framework for the design, application, and evaluation of interventions intended to prevent mental disorders and the transfer of knowledge about prevention from research to clinical practice. The book presents a focused research agenda, with recommendations on how to develop effective intervention programs, create a cadre of prevention researchers, and improve coordination among federal agencies.

Pedestrian Protection Systems (PPSs) are on-board systems aimed at detecting and tracking people in the surroundings of a vehicle in order to avoid potentially dangerous situations. These systems, together with other Advanced Driver Assistance Systems (ADAS) such as lane departure warning or adaptive cruise control, are one of the most promising ways to improve traffic safety. By the use of computer vision, cameras working either in the visible or infra-red spectra have been demonstrated as a reliable sensor to perform this task. Nevertheless, the variability of human's appearance, not only in terms of clothing and sizes but also as a result of their dynamic shape, makes pedestrians one of the most complex classes even for computer vision. Moreover, the unstructured changing and unpredictable environment in which such on-board systems must work makes detection a difficult task to be carried out with the demanded robustness. In this brief, the state of the art in PPSs is introduced through the review of the most relevant papers of the last decade. A common computational architecture is presented as a framework to organize each method according to its main contribution. More than 300 papers are referenced, most of them addressing pedestrian detection and others corresponding to the descriptors (features), pedestrian models, and learning machines used. In addition, an overview of topics such as real-time aspects, systems benchmarking and future challenges of this research area are presented. This publication contains the proceedings of a seminar held in Brussels on November 8-9, 1988. The title of the seminar was "Reducing the costs of disease by improving resistance through genetics". The seminar was held as an activity of the Community Programme for the Coordination of Agricultural Research, 1984-1988. Costs of disease depend on losses caused by morbidity, mortality and production decreases and on the costs of preventive measures including vaccination and medication. Production losses often contribute a major portion to the total costs. To reduce costs of disease preventive measures like vaccination, preventive medication and hygienic procedures are applied. Genetic resistance is an attractive preventive measure because of its consistent nature in the next generations, because it precludes veterinary services and because there are no side-effects. Constraints are the long term investment, relatively slow progress per generation (in combination with production traits) and the considerable lack of knowledge about inheritance of resistance mechanisms in farm animals. Prepared by the Highway Innovative Technology Evaluation Center (HITEC), a CERF Service Center. This report summarizes the results of a detailed evaluation of Friction Pendulum Bearings, manufactured by Earthquake Protection Systems, Inc. The report is part of a program to test the performance of 11 seismic isolators and dampers produced by several manufacturers. The devices were tested for stability, response during earthquake simulations, and fatigue and weathering effects.

Insecticides: Action and Metabolism provides a comprehensive review of the action of insecticides and a survey of their metabolism. This book discusses the toxicology of insecticides. Organized into 17 chapters, this book begins with an overview of the mechanisms whereby toxicants exert their effects. This text then

discusses the insecticidal action of organophosphates, which is described as the toxic organic compounds containing phosphorus. Other chapters consider the mode of action of organophosphates by inhibiting cholinesterase with consequent disruption of nervous activity caused by accumulation of acetylcholine at nerve endings. This book discusses as well the erratic patterns of selective toxicity to insects of the carbamates. The final chapter deals with the real hazard to human health as well as the effects upon wild life of insecticides and chlorinated pesticides. This book is a valuable resource for organic and agricultural chemists, as well as biologists, agriculturists, neurophysiologists, environmental scientists, and research workers.
