The Encyclopaedia fills a gap in both the history of science and in cultural studies. Reference works on other cultures tend either to omit science completely or pay little attention to it, and those on the history of science almost always start with the Greeks, with perhaps a mention of the Islamic world as a translator of Greek scientific works. The purpose of the Encyclopaedia is to bring together knowledge of many disparate fields in one place and to legitimize the study of other cultures' science. Our aim is not to claim the superiority of other cultures, but to engage in a mutual exchange of ideas. The Western academic divisions of science, technology, and medicine have been united in the Encyclopaedia because in ancient cultures these disciplines were connected. This work contributes to redressing the balance in the number of reference works devoted to the study of Western science, and encourages awareness of cultural diversity. The Encyclopaedia is the first compilation of this sort, and it is testimony both to the earlier Eurocentric view of academia as well as to the widened vision of today. There is nothing that crosses disciplinary and geographic boundaries, dealing with both scientific and philosophical issues, to the extent that this work does. xi PERSONAL NOTE FROM THE EDITOR Many years ago I taught African history at a secondary school in Central Africa. International Exchange in the Early Modern Book World presents new research on the movement and exchange of books between countries, languages and confessions. It explores commercial networks and business strategies, and the translation and circulation of literature, music and drama. Part II deals with agricultural science, alchemy, chemistry and chemical technology, mining and metallurgy military technology, textiles and manufacturing industries, mechanical technology, civil engineering, navigation and ship-building, medicine and pharmacy. Historians of Islamic science tend to limit their studies to the period up to the 16th century but, Part II of this volume also deals with the continuation of science and technology in the Ottoman Empire, India and Iran. Das vorliegende Buch versteht sich als Kompendium zum neuen Lehrfach "Ethik und Geschichte der Medizin und der Zahnmedizin". Anlass ist die 2021 verabschiedete zahnärztliche Approbationsordnung, inhaltliche Grundlage der "Nationale Kompetenzbasierte Lernzielkatalog Zahnmedizin" (NKLZ). Teil I des Kompendiums widmet sich dem Teilgebiet Geschichte, Teil II der Ethik unter Berücksichtigung klinisch-ethischer Fallberichte. In beiden Teilen liegt der Schwerpunkt der Ausführungen auf der Zahnheilkunde und ihren Fachvertretern. Daneben werden zahlreiche Bezüge zur Medizin und zur Ärzteschaft hergestellt, so wie es die neue zahnärztliche Approbationsordnung für dieses Lehrfach vorsieht. A unique resource that synthesizes existing primary and secondary sources to provide a fascinating introduction to the development and dissemination of science within history's great empires, as well as the complex interaction between imperialism and scientific progress over two centuries. Imperialism and Science is a scholarly yet accessible chronicle of the impact of imperialism on science over the past 200 years, from the effect of Catholicism on scientific progress in Latin America to the importance of U.S. government funding of scientific research to America's preeminent place in the world. Spanning two centuries of scientific advance throughout the age of empire, Imperialism and Science sheds new light on the spread of scientific thought throughout the former colonial world. Science made enormous advances during this period, often being associated with anti-Imperialist struggle or, as in the case of the science brought to 19th-century China and India by the British, with Western cultural hegemony. Zahnmedizin / Kind. Studies on Ottoman Science and Culture brings together eleven articles by distinguished historian Ekmeleddin İhsanoğlu. The book addresses multiple issues related to the histories of science and culture during the Ottoman era. Most of the articles contained in this volume were the first contributions to their respective topics, and they continue to provoke discussion and debate amongst academics to this day. The first volume of the author's collected papers that appeared in the Variorum Collected Studies (2004) dispelled the negative opinions towards Ottoman science asserted by scholars of the previous generation. In this new volume, the author continues to explore and develop the paradigm of scientific activities and cultural interactions both within and beyond the Ottoman Empire. One of the topics examined is the attitude of Islamic scholars towards revolutionary notions in Western science, including Copernican heliocentrism and Darwin's theory of evolution. This book will appeal to scholars and students of Ottoman history, as well as those interested in the history of science and cultural history. (CS1098).
