The adventure begins with a rocky start; Krogstads flight instructor dies in an airplane crash. That realization seems to cast a residual shadow on Krogstads entire flying career. Through twenty years, more than ten thousand hours of flight, and more than a million miles of flying in extraordinary airplanessingle engines to jetson extraordinary missions, Krogstad experienced more close calls, near misses, and potential disastersas well as some calamitiesthan most pilots ever hear about. Krogstad has landed and taken off in every state in the continental US, and his Alaskan adventures are among the most diverse and exciting as any pilot could experience. Every flight project was uniquely challenging and often carried with it the risks borne of unproven techniques and equipment. The technicalities of the work, the equipment, and the flying environment were complex, and Krogstad clearly defines them as they contribute to the bizarre events that defined his flying experiences and career. The gradual loss of hearing clearly loomed as the eventual loss of Krogstads license to fly, but the actual end of his flying career was the devastating result of a personal disaster that haunted his being long after retiring from flying. The X-31 Enhanced Fighter Maneuverability Demonstrator was unique among experimental aircraft. A joint effort of the United States and Germany, the X-31 was the only X-plane to be designed, manufactured, and flight tested as an international collaboration. It was also the only X-plane to support two separate test programs conducted years apart, one administered largely by NASA and the other by the U.S. Navy, as well as the first X-plane ever to perform at the Paris Air Show. Flying Beyond the Stall begins by describing the government agencies and private-sector industries involved in the X-31 program, the genesis of the supermaneuverability concept and its initial design breakthroughs, design and fabrication of two test airframes, preparation for the X-31's first flight, and the first flights of Ship #1 and Ship #2. Subsequent chapters discuss envelope expansion, handling qualities (especially at high angles of attack), and flight with vectored thrust. The book then turns to the program's move to NASA's Dryden Flight Research Center and actual flight test data. Additional tasking, such as helmet-mounted display evaluations, handling quality studies, aerodynamic parameter estimation, and a "tailless" study are also discussed. The book describes how, in the aftermath of a disastrous accident with Ship #1 in 1995, Ship #2 was prepared for its outstanding participation in the Paris Air Show. The aircraft was then shipped back to Edwards AFB and put into storage until the late 1990s, when it was refurbished for participation in the U. S. Navy's VECTOR program. The book ends with a comprehensive discussion of lessons learned and includes an Appendix containing detailed information. Lakes across the globe require help. The Lake Restoration Handbook: A New Zealand Perspective addresses this need through a series of chapters that draw on recent advances in modelling and monitoring tools, citizen science and First Peoples' roles, catchment and lake-focused restoration techniques, and policy implementation. New Zealand lakes, like lakes across the globe, are subject to multiple pressures that have increased in severity and scale as land use has intensified, invasive species have spread and global climate change becomes manifest. This books builds on the popular Lake Managers Handbook (1987), which provided guidance on undertaking investigations into, and understanding lake ecosystems in New Zealand. The Lake Restoration Handbook: A New Zealand Perspective synthesises contemporary issues related to lake restoration and rehabilitation, integrated with social science and cultural viewpoints, and complemented by authoritative topic-area summaries by renowned scientists and practitioners from across the globe. The book examines the progress of lake restoration and the new and emerging tools available to managers for predicting and effecting change. The book will be a valuable resource for natural and social scientists, policy writers, lake managers, and anyone interested in the health of lake ecosystems. THE BOYS WHO BRING IN THE CROP is a mostly true story about a group of amateur marijunana smugglers who operated out of Florida in the mid seventies. These guys really had some cajones, they did their thing right under the noses of the law. They made seven flights to Colombia and back and never got caught, partly because they were smart and planned well, partly because of dumb luck. The book is fast paced, it all takes place in less than one year. Along the way there is plenty of adventure, not everything goes as planned. There is some romance thrown in, these guys knew how to enjoy life with the piles of money they accumulated.
