For most of human history, paternity was uncertain. Blood type testing, fingerprinting, and, recently, DNA analysis promised to solve the riddle of paternity. But even genetic certainty did not end the quest for the father. Rather, as Nara Milanich reveals, it confirms the social, cultural, and political nature of the age-old question: Who's your father? This book focuses on CFD (Computational Fluid Dynamics) techniques and the recent developments and research works in thermo-mechanics applications. It is devoted to the publication of basic and applied studies broadly related to this area. The chapters present the development of numerical methods, computational techniques, and case studies in the thermo-mechanics applications. They offer the fundamental knowledge for using CFD in real thermo-mechanics applications and complex flow problems through new technical approaches. Also, they discuss the steps in the CFD process and provide benefits and issues when using the CFD analysis in understanding complicated flow phenomena and its use in the design process. The book

practices for reducing errors and uncertainties in CFD analysis are also discussed. The presented case studies and development approaches also provide the readers, such as engineers and PhD students, the fundamental knowledge of CFD prior to embarking on any real simulation project. Additionally, engineers supporting or being supported by CFD analysts can benefit from this book.

? Quelles mesures disciplinaires doit appliquer l'école afin de contrer les comportements violents des enfants de 3 à 9 ans, sans entraver leur processus de scolarisation et de socialisation? Quels sont les défis et enjeux de la collaboration entre l'école et les parents de ces enfants ? Ces questions que les auteures tentent d'apporter des éléments de réponse. Elles ont recueilli leurs données dans le cadre d'entrevues effectuées auprès de soixante parents d'enfants de 3 à 9 ans, qui ont fait l'objet d'une suspension ou d'une possibilité de suspension scolaire à la suite de comportements violents envers leurs pairs. A partir des perceptions parentales, elles décrivent des pratiques, des moyens et des solutions qui permettront de mieux collaborer avec l'école. Toutefois, les dires des parents suscitent énormément de réactions: leur perception du problème peut parfois sembler inconfortable et dérangement, notamment aux yeux du personnel scolaire. C'est pour cette problématique exige non seulement de poursuivre la réflexion et l'action mais également la recherche dans le domaine de la prévention et de l'intervention précoces de la violence au préscolaire et au primaire, dont le but ultime est d'assurer le mieux-être des enfants, de leur famille, de la communauté, voire de toute une société. Le programme mondial des Nations Unies pour l'évaluation des ressources en eau (WWAP) est hébergé par l'UNESCO. Le WWAP rassemble les travaux de 31 membres d'ONU-Eau et de 38 partenaires pour publier le Rapport mondial des Nations Unies sur la mise en valeur des ressources en eau (WWDR). Le Rapport mondial sur la mise en valeur des ressources en eau porte sur des questions stratégiques liées à l'eau. Les membres et partenaires d'ONU-Eau, tous des experts dans leurs domaines respectifs, révèlent les découvertes les plus récentes sur ce thème spécifique. L'édition de 2017 du Rapport mondial sur la mise en valeur des ressources en eau porte sur les " eaux usées " et vise à informer les décideurs, à l'intérieur et à l'extérieur de la communauté de l'eau, sur l'importance de la gestion des eaux usées en tant que source sous-évaluée.

durable d'eau, d'énergie, de nutriments et d'autres sous-produits récupérables, plutôt que quelque chose à éliminer ou une nuisance à gérer. Le titre du rapport, Les eaux usées : Une ressource inexploitée, traduit un message crucial que les eaux usées sont appelées à jouer dans le contexte d'une économie circulaire, dans laquelle le développement économique s'équilibre avec la protection des ressources et la durabilité de l'environnement, et qu'une économie plus propre et plus durable a un effet positif sur la qualité de l'eau. L'amélioration de la gestion des eaux usées est essentielle non seulement à la réalisation de l'Objectif de développement durable portant sur l'eau et l'assainissement (ODD 6), mais aussi à d'autres objectifs du Programme de développement durable à l'horizon 2030. Dans un monde où la demande en eau douce augmente sans cesse, et où les ressources en eau limitées subissent de plus en plus des contraintes du fait de la surexploitation, de la pollution et des changements climatiques, il est tout simplement impensable de négliger les opportunités qu'offre l'amélioration de la gestion des eaux usées.

The study of coal for the production of energy is certainly a new area of research. Many research works were carried out to improve the efficiency of industrial and domestic facilities. In the sixties, however, because of the availability and low cost of petroleum, coal consumption decreased and the research effort in this area was minimum. Meanwhile, the situation totally changed. Considering the reserves of oil and the instability of reserves where they are located, it is becoming absolutely necessary to develop alternative sources of energy. The major alternative to oil appears to be coal, at least in the near future. Indeed, the reserves known today represent several centuries of energy consumption. It is therefore becoming urgent to develop efficient and non-polluting technologies to produce energy from coal. The main possibilities are : · liquefaction · gasification · directed combustion. Research and development efforts on liquefaction have been considerably reduced because of high cost of technologies involved and poor prospects for the next two decades. Research works on gasification are progressing; it is a promising approach. However, direct combustion either in pulverized coal furnaces or in fluidized beds is the more promising way of expanding the utilization of coal. These techniques are already used in some facilities. However, many environmental problems remain, slowing down their development.
