**History of the Language Sciences / Geschichte der Sprachwissenschaften / Histoire des sciences du langage. 1. Teilband** Dec 27 2020 Writing in English, German, or French, more than 300 authors provide a historical description of the beginnings and of the early and subsequent development of thinking about language and languages within the relevant historical context. The gradually emerging institutions concerned with the study, organisation, documentation, and distribution are considered as well as those dealing with the utilisation of language related knowledge. Special emphasis has been placed on related disciplines, such as rhetoric, the philosophy of language, cognitive psychology, logic and neurological science.

*Compact Oxford-Hachette French Dictionary* Aug 15 2022 A compact, intermediate-level dictionary covering over 90,000 words and phrases, and 120,000 translations ideal for the home, office, or school.

**A Case for Climate Engineering** Jul 02 2021 A leading scientist argues that we must consider deploying climate engineering technology to slow the pace of global warming. Climate engineering—which could slow the pace of global warming by injecting reflective particles into the upper atmosphere—has emerged in recent years as an extremely controversial technology. And for good reason: it carries unknown risks and it may undermine commitments to conserving energy. Some critics also view it as an immoral human breach of the natural world. The latter objection, David Keith argues in *A Scientist's Case for Climate Engineering*, is groundless; we have been using technology to alter our environment for years. But he agrees that there are large issues at stake. A leading scientist long concerned about climate change, Keith offers no naïve proposal for an easy fix to what is perhaps the most challenging question of our time; climate engineering is no silver bullet. But he argues that after decades during which very little progress has been made in reducing carbon emissions we must put this technology on the table and consider it responsibly. That doesn't mean we will deploy it, and it doesn't mean that we can abandon efforts to reduce greenhouse gas emissions. But we must understand fully what research needs to be done and how the technology might be designed and used. This book provides a clear and accessible overview of what the costs and risks might be, and how climate engineering might fit into a larger program for managing climate change.

**Under (de)construction** Feb 21 2023 For each palette of Spanish glass or Pennsylvania steel that arrives at a Manhattan block under construction, a truckload of rubble concrete and mangled steel debris containing the remnants of a pre-existing structure is hauled away. The building industry in New York City is a machine for material exchange: constantly importing materials in for the construction of new structures and exporting materials out in the form of waste, often to meet their ends in out-of-state landfills or to be recycled down as low-grade aggregates. So despite its seemingly reliable solidity, New York City's built environment can be characterized as much by its willful impermanence as it can by its staggering monumentality. Buildings rise and then fall over a matter of decades, often reaching their premature obsolescence in the face of shifting ownership, real-estate speculation, and amendments in planning policy. Blocks are continuously transformed to make way for new developments, often soaring higher than their individual predecessors. And in a city whose grid reached maximum capacity 70 years ago, nearly each new act of construction is preceded by acts of demolition. As key stakeholders in the processes of building, architects do not often take part in the processes of unbuilding. This thesis speculates on a scenario in which architects take agency over the other end of a building's life: its demolition. In doing so, salvaged and rubble materials are seen as resources for building, rather than as waste. Working within a city that whose built environment has historically embraced radicality and innovation, this thesis imagines new relationships between these materials and the processes of architecture within the urban environment.

*A Method for the Construction of Acoustic Markov Models for Words* Sep 16 2022 Abstract: "A new technique for constructing Markov models for the acoustic representation of words is described. Word models are constructed from models of sub-word units called fenones. Fenones represent very short speech events, and are obtained automatically through the use of a vector quantizer. The fenonic baseform for a word, i.e. the sequence of fenones used to represent the word, is derived automatically from one or more utterances of that word. Since the word models are all composed from a small inventory of sub-word models, training for large- vocabulary speech recognition systems can be accomplished with a small training script. A method for combining phonetic and fenonic models is presented. Results of experiments with speaker-dependent and speaker-independent models on several isolated-word recognition tasks are reported. Comparative results with phonetics-based Markov models and template-based DP matching are also given."

*Building Systems for Interior Designers* Apr 23 2023 The ultimate interior designer's guide to building systems and safety Building Systems for Interior Designers, Third Edition is the single-source technical reference that every

designer needs, and an ideal solution for NCIDQ exam preparation. Now in its third edition, this invaluable guide has been updated to better address the special concerns of the interior designer within the context of the entire design team. New coverage includes the latest information on sustainable design and energy conservation, expanded coverage of security and building control systems, and a new and expanded art program with over 250 new illustrations. Covering systems from HVAC to water to waste to lighting, this book explains technical building systems and engineering issues in a clear and accessible way to help interior designers communicate more effectively with architects, engineers, and contractors. Professional interior design is about much more than aesthetics and decorating, and technical knowledge is critical. Before the space is planned, the designer must consider the mechanical and electrical equipment, structural system, and building components, and how they impact the space. This book shows you how to evaluate these complex factors, and how each affects your work throughout the building. Consider how site conditions and structural systems affect interior design Design functionally for human health and safety Factor water, electrical, and thermal systems into your design plans Examine the ways in which lighting and acoustics affect the space The comfort, safety, and ultimate success of a project depend upon your knowledge of building system and your coordination with architects and engineers. Building Systems for Interior Designers, Third Edition provides the comprehensive yet focused information you need to excel at what you do best.

**Quarantined Thoughts Vol 3: Life Stories And Musings During A Pandemic** Jul 22 2020 They say that every 100 years or so, nature throws humans a curveball in the form of a pandemic. The effects, challenges, and changes may not be the same, still, a pandemic affects us all. But soon, everything we are experiencing will be part of history. The Coronavirus Disease 2019 (COVID-19) has not only slowed us down, but also changed the way we work, live, and plan for the future. Not only for the duration of the Enhanced Community Quarantine (ECQ), Modified ECQ, or General Community Quarantine (GCQ), but for a very long time. The Quarantined Thoughts ebook project (formerly called Coronavirus Chronicles) was created to give people something to do at home during the ECQ in March 2020. Our goal is to encourage everyone to chronicle life during a pandemic and help process thoughts and feelings through writing. Each of us has stories that deserve to be told. This is one of the many volumes. You can read the previous volumes here for free: ??Quarantined Thoughts Vol 1: <https://bit.ly/ReadQTVOL1> ??Quarantined Thoughts Vol 2: <https://bit.ly/ReadQTVOL2> This is Volume 3 with stories from ??Kath C. The sales from these platforms will be divided among the authors. Each author will then have the option to donate their royalties to the ABS-CBN Pantawid ng Pag-ibig - a program of ABS-CBN that uses cash donations "to buy food and basic necessities which are then distributed to different communities in need" in the Philippines, especially those greatly affected by the COVID-19 pandemic. The author can also donate his royalties to the charity of his choice. If you decide to buy and read the paid versions, thank you for helping us raise funds! A little goes a long way! Whichever you choose, please do share the links with your family and friends. You can also check the book on the PaperKat Books website: [bit.ly/QTVOL3onPKB](http://bit.ly/QTVOL3onPKB)

**How to Enhance Productivity Under Cost Control, Quality Control as Well as Time, in a Private or Public Organization** Mar 30 2021 Many corporates need to strengthen their industries in the global seethed technology and economic changes, particularly those from Africa. Products and services from the West and Central African regions are merely recognized as poor with low quality and lack of fitness. Productivity and cost are not under control and accordingly impact the level of competitiveness of many organizations. These organizations need to adapt their operations management processes to the environmental change by maintaining a creative outlook in the never-ending search for ways to solve customer problems and respond to customer needs by providing with speed a high-value product or service. Understanding change in operations-based forms of organization is made difficult by the dispersed nature of management practices in such organizations and their effects upon the reinforcement of localized practices and routines that militate against the spread of organization-wide change initiatives. By developing dynamic operations management based on project management methodology, employees and operators could improve the quality of product or service and optimize their productivity.

**No Waste** Jun 25 2023 Sustainability is a critical issue for the construction industry. In the short term, making the business case for sustainability is often very problematic. In the longer term, large contractors will see it as a source of competitive advantage and, public sector construction, infrastructure and other large projects such as Thames Gateway and the Olympics in 2012 are all being driven down this route by pressure from Government. Uly Ma's Sustainability in Construction is an extremely practical guide to sustainable construction techniques that draws on input from all of the related stakeholders; construction industry itself, designers and architects and materials suppliers. The book explores sustainable construction at the micro level of good site practice, as well as looking at the competitive advantage offered by organizations offering this approach in international construction projects. The text covers the management of sustainability and the accompanying CD ROM includes a wealth of material as Powerpoint presentations, templates and activities that can be shared throughout the organization and used for team meetings, communication and training.

*Engineering Optimization 2014* Apr 30 2021 Optimization methodologies are fundamental instruments to tackle the complexity of today's engineering processes. Engineering Optimization 2014 is dedicated to optimization methods in engineering, and contains the papers presented at the 4th International Conference on Engineering Optimization (ENGOPT2014, Lisbon, Portugal, 8-11 September 2014). The book will be of interest to engineers, applied mathematicians, and computer scientists working on research, development and practical applications of optimization methods in engineering.

**Massachusetts Csl Restricted / Unrestricted Construction Supervisor Examfocus Study Notes & Review Questions 2016/17** Oct 29 2023 In Massachusetts, the building code requires that construction of all one and two family dwellings of any size and all other types of buildings containing less than 35,000 cubic feet of enclosed space must be performed under the supervision of a Construction Supervisor licensed by the State Board of Building Regulations and Standards. There are several different specialties. The restricted license is for one and two family residential buildings ONLY, while the unrestricted license is okay for buildings up to 35000 cubic feet in size. They both require solid foundation knowledge on building structures, materials and safety procedures. Our study notes focuses on the relevant structural concepts, building material and safety procedures which are covered by both the Unrestricted CSL exam and the Restricted CSL exam. This ExamFOCUS book focuses on the more difficult topics that will likely make a difference in exam results. The book is NOT intended to guide you through every single official topic. You should therefore use this book together with other reference books for the best possible preparation outcome.

**Arthur H. Vinal / Edmund March Wheelwright and the Chestnut Hill Pumping Station** Jun 20 2020 This book arose from a need to understand one of late nineteenth century Boston's most prominent buildings, the Chestnut Hill

High Service Pumping Station, now the Metropolitan Waterworks Museum. It considers how such a municipally designed, high-style, Richardsonian Romanesque, yet also industrial, building came into existence. Arthur H. Vinal and Edmund March Wheelwright, its two architects working a decade apart, in 1884-88 and 1898-99 respectively, left a seamlessly unified building. They were never partners nor colleagues. But almost sequentially, in 1884-88 and 1891-95 respectively, each was given charge of the same large municipal architectural office. Each also began his professional career, again almost in sequence, with same important firm, Peabody & Sterns, after which each left Boston for a few years before returning. Wheelwright and Vinal came from different backgrounds and arguably had differing sensibilities. Vinal's generally preferred style as City Architect was Richardsonian Romanesque — a mode Wheelwright never employed, except when extending Vinal's Chestnut Hill Pumping Station. Remarkably, the written record suggests these two architects had no other connections, despite having both practiced, throughout their careers, in the guild-like world of Boston's late-nineteenth to early-twentieth century architectural profession. They only had in common the Chestnut Hill High Service Pumping Station and the distinction of having been, for approximately four highly productive years each, Boston's City Architect. There has been no previous study of either architect's work. In Vinal's case, except for his time as City Architect, his career and life left a scant written record. Almost none of his work was published. It is primarily known to us through municipal records, advertisements for constructor bids, and occasional references in newspaper articles. Other than his term as City Architect, which produced the major portion of the Chestnut Hill Pumping Station and a remarkable number of municipal buildings in a short time, his career was little different from those of many other successful, now largely forgotten, architects who contributed to the fabric of an expanding metropolitan Boston during its so called Golden Age from the Civil War through the First World War. Most of what he produced was conservative, well constructed row housing plus some multi-story buildings containing the then still novel "French flats." In contrast, Wheelwright's work was published. He was active and well respected at the highest levels of the profession, locally and nationally. Far more is known of his life and practice. Even in the relatively conservative milieu of metropolitan Boston, his work could not generally be called dramatic, although there were exceptions. Rather than simply representing an aesthetic exercise, his architecture was also informed by his predisposition to political and social reform. Perhaps as a result, while not unknown, he has not received the attention he deserves. The present study for the most part tells its stories visually. It is heavily illustrated. In addition to Vinal and Wheelwright, a third actor is touched upon, that is the City Architect's Office, with its patronage and professional practice, and its evolution over the two decades — having been initially created as a good government reform in 1874 and finally abolished with, Wheelwright's support, for similar reasons in 1895. Without it, neither architect could have designed and built the prodigious number of buildings credited to them during their tenures. Lastly, this volume includes an attempt to produce catalogs raisonné of Vinal's and Wheelwright's known bodies of work — which, in each case, research for this study has significantly expanded.

Civil Engineering Materials Mar 22 2023 Civil Engineering Materials: From Theory to Practice presents the state-of-the-art in civil engineering materials, including the fundamental theory of materials needed for civil engineering projects and unique insights from decades of large-scale construction in China. The title includes the latest advances in new materials and techniques for civil engineering, showing the relationship between composition, structure and properties, and covering ultra-high-performance concrete and self-compacting concrete developed in China. This book provides comprehensive coverage of the most commonly used, most advanced materials for use in civil engineering. This volume consists of eight chapters covering the fundamentals of materials, inorganic cementing materials, Portland cement concrete, bricks, blocks and building mortar, metal, wood, asphalt and polymers. Describes the most commonly used civil engineering materials and updates on advanced materials Presents advanced materials and their applications in civil engineering Looks at engineering problems pragmatically from both a materials and civil engineering perspective Gives knowledge and guidance rooted in decades of experience in Chinese civil engineering projects Contextualises knowledge of civil engineering materials in infrastructure construction, including high-speed rail

**Deconstruction/construction** Nov 06 2021 Someone ought to walk to Washington to tell the government to stop this war - Louise Bruyn Louise Bruyn did just that 1971 - America has been at war in Vietnam for almost six years. The death toll is rising, both for the U.S., and for the "enemy." Louise Bruyn had enough It was time to do something. What could one woman do that would make Congress take notice of her protest? She decided to walk-from her home in Newton, Massachusetts to Washington, D.C. to make her point. Massachusetts Senator Ted Kennedy and Representative Robert Drinan met her on the Capitol steps. What a point she made People all over the country rallied to support her. Finally, someone was saying what so many citizens wanted to, and had no idea how to, say-"Stop this War " This is her diary, day-by-day, detailing her struggles with fear, her encounters with people along the way, and the many wonderful people who opened their homes, encouraged her, and helped her on her way. From Midwest Book Review: Deftly written, personally candid, often insightful, occasionally inspiring, always engaging, "She Walked for All of Us, One Woman's 1971 Protest Against an Illegal War" is an iconic read and highly recommended for anyone who has ever aspired to protest against a perceived social or governmental injustice. "She Walked for All of Us" would make an enduringly important addition to community and college library Social Activism and 20th Century American Biography collections.

**Cal/OSHA Pocket Guide for the Construction Industry** Dec 07 2021 The Cal/OSHA Pocket Guide for the Construction Industry is a handy guide for workers, employers, supervisors, and safety personnel. This latest 2011 edition is a quick field reference that summarizes selected safety standards from the California Code of Regulations. The major subject headings are alphabetized and cross-referenced within the text, and it has a detailed index. Spiral bound, 8.5 x 5.5"

**Project Management for Facility Constructions** Sep 28 2023 This book describes concepts, methods and practical techniques for managing projects to develop constructed facilities in the fields of oil & gas, power, infrastructure, architecture and the commercial building industries. It is addressed to a broad range of professionals willing to improve their management skills and designed to help newcomers to the engineering and construction industry understand how to apply project management to field practice. Also, it makes project management disciplines accessible to experts in technical areas of engineering and construction. In education, this text is suitable for undergraduate and graduate classes in architecture, engineering and construction management, as well as for specialist and professional courses in project management.
