What statistical evid shows us about our misguided educational policies Uneducated Guesses challenges everything our policymakers thought they knew about education and education reform how to close the achievement gap in public schools to admission standards for top universities. In this explosive book, Howard Wainer uses statistical evidence to show v some of the most widely held beliefs in education today—and the policies that have resulted—are wrong. He shows why colleges that make the SAT optional for applicants with underperforming students and inflated national rankings, and why the push to su achievement tests for aptitude tests makes no sense. Wainer challenges the thinking b the enormous rise of advanced placement courses in high schools, and demonstrates v assessing teachers based on how well their students perform on tests—a central pillar education reforms—is woefully misguided. He explains why college rankings are often b in hard evidence, why essay questions on tests disadvantage women, why the most g errors in education testing are not made by testing organizations—and much more. No concerned about seeing our children achieve their full potential can afford to ignore th book. With forceful storytelling, wry insight, and a wealth of real-world examples, Uneducated Guesses exposes today's educational policies to the light of empirical evid and offers solutions for fairer and more viable future policies. How does graduate adm work? Who does the system work for, and who falls through its cracks? More people ever seek graduate degrees, but little has been written about who gets in and why. Dr firsthand observations of admission committees and interviews with faculty in 10 top doctoral programs in the humanities, social sciences, and natural sciences, education professor Julie Posselt pulls back the curtain on a process usually conducted in secret “Politicians, judges, journalists, parents and prospective students subject the admission policies of undergraduate colleges and professional schools to considerable scrutiny, v much public debate over appropriate criteria. But the question of who gets into Ph.D. programs has by comparison escaped much discussion. That may change with the pub of Inside Graduate Admissions...While the departments reviewed in the book remain se the general process used by elite departments would now appear to be more open as Posselt's book.” —Scott Jaschik, Inside Higher Ed “Revealing...Provide[s] clear, consisten insights into what admissions committees look for.” —Beryl Lieff Benderly, Science This provides a comprehensive review of all the question types, concepts, and skills covered Reading portion of the redesigned SAT. DIVAlfie only feels comfortable when he's draw comics in the attic—but soon his safe haven will be off limits/divDIV Alfie is perfectly c

to spend his time drawing alone in the attic. Nobody bothers him, and he has his door tight against interruption. Up under the roof, he illustrates amazing cartoon strips about heroes and space adventures, from "Super Caterpillar" to "Super Bird"—even though his life is anything but exciting. One day, Alfie's mom calls him from the attic to tell him his older brother Bubba will be moving home and will take over the attic as his own apartment. Suddenly Alfie's private world is turned inside out, and he'll need to find a new "home," even if that means spending time around his weird, argumentative family.

This ebook features an illustrated biography of Betsy Byars including rare images from the author's personal collection.

Teachers often spend a considerable amount of their time monitoring and assessing their pupils' performance. But what are we assessing and can assessment practices be changed to make them more useful to teachers and students? Assessment activities in schools are frequently criticised by government inspectors - often being reported as the least successful aspect of schools' work. Drawing on established research, *Making Assessment Matter* focuses on the purpose of assessment, and suggests strategies for managing assessment in a more effective way. The author considers the role of assessment in promoting learning, rather than simply measuring it, provides tips on setting and attaining assessment targets, and brings together considerations of 'high stakes' assessment at the national level with day-to-day assessment practice in the classroom. This timely and informative book will be essential reading for anyone involved with, or interested in, the role of assessment within schools, including teachers, trainee teachers and managers.

*Debates in Geography Education* encourages early career teachers, experienced teachers and teacher educators to engage with and reflect on key issues, concepts and debates. It will enable readers to reach their own informed judgements with deeper theoretical knowledge and understanding. The second edition is fully updated in light of the latest research, practice and policy in the field, as well as key changes to the curriculum and examination specifications. Expert contributors provide a range of perspectives on international, historical and policy contexts in order to deepen our understanding of significant debates in geography education. Key debates include: geography's identity as an academic discipline; what constitutes knowledge in geography; places and regional geography; what it means to be geographically; constructing the curriculum; how we link assessment to making progress in geography; the contribution of fieldwork and outdoor experiences; technology and the Geographical Information System; school geography and employability; understanding the gap between school and university geography; evidence-based practice and research in geography education. The comprehensive, rigorous coverage of these key issues, together with carefully annotated selected further reading, will help support and shape further research and writing. *Debates in Geography Education* is a key resource that is essential reading for all teachers and researchers who wish to extend their grasp of the place of geography in education.

The writing of this book has its origins in 1988. That was the year in which the most substantial piece of educational legislation since 1944, bringing in radical changes affecting the education system of England and Wales, completed its passage through Parliament. It was also the year in which I found myself not only an academic lecturing and researching in the field of educational assessment but also a part-player in the large supporting cast of people helping to implement a central provision of that Act, the National Curriculum with its associated assessment arrangements. I was appointed a member of the College Entrance Examination Board and the Educational Testing Service claim that the SAT helps colleges select students, helps college-bound students select appropriate institutions, and furthers equality of opportunity. But does it really? Drawing on three national surveys and on hundreds of studies conducted by colleges, the authors refute the justifications the College Board and the ETS give for requiring high school students to take the SAT. They show that the test neither helps colleges and universities improve their admissions decisions nor helps applicants choose schools in which they will be successful. They outline the adverse effect the SAT has on students from nonwhite and low-income backgrounds. They also question the ability of the College Board and the ETS to monitor themselves adequately. The authors do not, however, recommend abolishing either college admissions testing or the College Board and the ETS. Rather, they propose dropping the SAT and relying on such already available measures as students' high school coursework and grades, and they raise the possibility that new achievement tests to measure the mastery of high school courses could be developed to replace the SAT. This forward-looking book combines theory and practice to present a broad introduction to the opportunities and challenges of teaching English in secondary school classrooms. Each chapter explains the background to current debates about teaching a subject and provides tasks, teaching ideas, and further reading to explore issues and ideas in relation to school experience. With reference to new legislation, the chapters suggest a range of approaches to the teaching of reading, writing, speaking and listening, drama, media studies, information technology, language study, grammar, poetry, Shakespeare, GNVQ and A Level English Language and Literature. Learning to Teach English in the Secondary School offers principles and practical examples of teaching and learning in the context of the end of the twentieth century when new notions of literacy compete with the demands of national assessment. Taking as its starting point the changing ideologies of English as a subject, this text addresses questions about the nature of teacher education. It raises issues concerning competence-based courses, working with a mentor in school and monitoring the development of a student teacher. Learning to Teach Subjects in the Secondary School series, edited by Tony Capel, Tony Turner and Marilyn Leask. Part historical essay, part scientific article, and part enthralling diary-Roald Amundsen's (1872-1928) book presents intriguing documentation about how his expedition reached the South Pole on December 14, 1911, just one month ahead of his rival, Robert Scott. Amundsen organized his gripping account using what is now referred to in the film industry as the zooming technique. It starts in the past, examining the history of Antarctic exploration in different eras, and then moves ahead to describe how his own expedition was created, its organization, the slow stages involved in preparing for departure and, finally, the heart-stopping excitement of the race to the South Pole. Supplementing the vivid first-person text are black-and-white archival photographs illustrating the actual expedition, and color photographs depicting the landscape of Antarctica. Provides comprehensive advice for those training to become primary teachers. A beloved chapter book full of adventure, mischief, and chocolate popsicles, from Newbery Medal-winning author Betsy Byars! This chapter book is an excellent choice to share during homeschooling, in particular for children ages 6 to 8 who are ready to read independently. It's a fun way to keep your child engaged and as a supplement for activity books for children. One Saturday, Jackson and his best pal, Goat, hide treasures for each other to find with clues—and it's so much fun that the boys decide to do it all over again. Only this time, the hunts will be trickier, and the prizes will be outstanding. But somehow, the best treasure disappears from its hiding place. Only one person could be responsible: the ogre, also known as Goat's older sister, Rachel. Can the two friends find the treasure before the ogre gets her last laugh? This indispensable textbook provides the underpinning knowledge to support teaching assistants working towards Level 2 of the National Occupational Standards. 7
