Critical Care Feb 26 2021 "Doctors heal, or try to, but as nurses we step into the breach, figure out what needs to be done for any given patient today, on this shift, and then, with love and exasperation, do it as best as we can."—from *Critical Care* "At my job, people die," writes Theresa Brown, capturing both the burden and the singular importance of her profession. Brown, a former English professor at Tufts University, chronicles here her first year as an R.N. in medical oncology. As she does so, Brown illuminates the unique role of nurses in health care, giving us a deeply moving portrait of the day-to-day work nurses do: caring for the person who is ill, not just the illness itself. *Critical Care* takes us with Brown as she struggles to tend to her patients' needs, both physical (the rigors of chemotherapy) and emotional (their late-night fears). Along the way, we see the work nurses do to fight for their patients' dignity, in spite of punishing treatments and an often uncaring hospital bureaucracy. We also see how a twelve-hour day of caring for the seriously ill gives Brown herself a deeper appreciation of what it means to be alive. Ultimately, this is a book about embracing life, whether in times of sickness or health. As she takes us into the place where patients and nurses meet, Brown shows us the power of human connection in the face of mortality. She does so with a keen sense of humor and remarkable powers of observation, making *Critical Care* a powerful contribution to the literature of medicine.

Every Deep-Drawn Breath Mar 10 2022 "Perhaps one lesson to draw from the pandemic, with help from books like this one, is that the ICU experience can be changed for the better" (The Washington Post) for both patients and their families. You will learn how in this timely, urgent, and compassionate work by a world-renowned critical care doctor. Over the next ten years, 40 to 60 million people in this country will be admitted to the ICU. Most of these hospitalizations will be sudden, unexpected, and harrowing experiences that can alter patients and their families physically and emotionally, with effects that endure for years. In this rich blend of science, medical history, profoundly humane patient stories, and personal reflection, Dr. Wes Ely describes his mission to prevent patients from being inadvertently harmed by the technology that is keeping them alive. You will experience the world of

critical care through the eyes of a physician who drastically changed his clinical practice to offer person-centered health care, and through cutting-edge research convinced others to do the same. For decades, ICU survivors left the hospital with disabling symptoms including newly acquired dementia, depression, PTSD, and nerve damage, all now recognized as Post Intensive Care Syndrome, or PICS. Dr. Ely's groundbreaking investigations advanced the understanding of PICS and introduced crucial changes that reshaped intensive care: minimizing sedation, maximizing mobility, listening to the family, and providing supportive aftercare. Dr. Ely shows that there are ways to bring humanity into the ICU and that "technology plus touch" is the future of health care and is a proven path toward returning ICU patients to the lives they had before their hospital stay. An essential resource for anyone who will be affected by illness—which is all of us—Ely's "personal, passionate return to the ethical heart of the Hippocratic oath" [offers] meaningful, thought-provoking insight into the world of critical care" (Kirkus Reviews).

Handbook of Critical and Intensive Care Medicine Feb 21 2023 Why write a book on the management of critically ill patients? Over the past few decades we have seen an enormous growth in the number of intensive care units (ICU) across the world. Indeed, it is estimated that a large proportion of health care expenses are devoted to patients in these specialized units. Medical students, residents, fellows, attending physicians, critical care nurses, pharmacists, respiratory therapists, and other health-care providers (irrespective of their ultimate field of practice) will spend several months or years of their professional lives taking care of critically ill or severely injured patients. These clinicians must have special training, experience, and competence in managing complex problems in their patients. Moreover, these clinicians must interpret data obtained by many kinds of monitoring devices, and they must integrate this information with their knowledge of the pathophysiology of disease. Even more important is the fact that anyone working in an ICU or with a critically ill patient must approach patients with a multidisciplinary team. The phrase there is no I in TEAM comes to mind.
