The Routes Not Taken Sep 29 2023 It took more than four years to build the subway line from City Hall to West 145th Street in Harlem. Things rarely went that quickly ever again. 'The Routes Not Taken' explores the often dramatic stories behind the unbuilt or unfinished subway lines, shedding light on a significant part of New York City's history that has been almost completely ignored until now. By focusing on the unbuilt lines, Raskin illustrates how the existing subway system is actually a Herculean feat of countless political compromises.

**Routes, Roads and Landscapes** Jun 26 2023 Routes and roads make their way into and across the landscape, defining it as landscape and making it accessible for many kinds of uses and perceptions. Bringing together outstanding scholars from cultural history, geography, philosophy, and a host of other disciplines, this collection examines the complex entanglement between routes and landscapes. It traces the changing conceptions of the landscape from the Enlightenment to the present day, looking at how movement has been facilitated, imagined and represented and how such movement, in turn, has conditioned understandings of the landscape. A particular focus is on the modern transportation landscape as it came into being with the canal, the railway, and the automobile. These modes of transport have had a profound impact on the perception and conceptualization of the modern landscape, a relationship investigated in detail by authors such as Gernot Böhme, Sarah Bonnemaïson, Tim Cresswell, Finola O'Kane, Charlotte Klonk, Peter Merriman, Christine Macy, David Nye, Vittoria Di Palma, Charles Withers, and Thomas Zeller.

*Up the Heights of Fame and Fortune* May 14 2022 Excerpt from *Up the Heights of Fame and Fortune: And the Routes Taken by the Climbers to Become Men of Mark* The present volume is intended for popular reading. It has been prepared with direct reference to supplying a large circle of readers with a fund of practical information of an interesting nature, and of an instructive and elevating character. It has come to be true that information must be compactly given, if it is to be acceptable to any considerable number of people: it is believed that this volume furnishes, in an entertaining series of biographies in Part I, a chain of remarkable facts and events not heretofore grouped together, or otherwise accessible in any available form. With the decease of Prof. S. F. B. Morse, in April of the present year, culminated the career of the last one of less than a dozen men whose inventions and improvements have changed the industrial, commercial, and social relations of the world. In this work the lives of some of these men are given in nearly chronological order. A single unit only has been added to the column of centuries, beyond three years for grace, since Watt secured the first patent on his Condensing Engine; and not even a century has passed since Boulton and Watt became partners and began the manufacture of Steam-engines: now there are said to be engaged in the manufacturing and labor interests of Great Britain alone a hundred thousand of them, without mentioning Locomotives, or engines employed in navigation. Perhaps three times as many more Steam-engines are employed in other countries. The civilized world may fairly be said to tremble beneath the surging power and groaning thug of iron arms and sinews, propelled by steam. History of the Mail Routes to Ireland until 1850 Jul 16 2022 Mail communication between London and Ireland was very important for both official and trade purposes from the 15th Century. From the mid 16th Century a number of designated ports were used to ship the mail to Ireland and posts were laid to those ports along defined routes, however, these routes were subject to change. This book identifies the ports, when they were used and presents the history of the changes to those routes from that early time until 1850. Detailed descriptions of the routes are given in text, tables and figures showing how they changed over these years, together with a discussion of those changes and a commentary on the improvements that were made to the roads over the years, particularly in the difficult areas of North Wales, South Wales and South West Scotland. Also included is the history of the Edinburgh to Portpatrick route. Finally the effect of the introduction of the railways on the carriage of mail to Ireland is described.

The Routes Not Taken Oct 31 2023 A fascinating journey into the past—and under the ground—that offers “an insightful look at the what-might-have-beens of urban mass transit” (The New York Times). From the day it broke ground by City Hall in 1900, it took about four and half years to build New York’s first subway line to West 145th Street in Harlem. Things rarely went that quickly ever again. The Routes Not Taken explores the often-dramatic stories behind unbuilt or unfinished subway lines. The city’s efforts to expand its underground labyrinth were often met with unexpected obstacles—financial shortfalls, clashing political agendas, battles with community groups, and more. After discovering a copy of the 1929 subway expansion map, Joseph B. Raskin began his own investigation into the city’s underbelly. Here he provides an extensively researched history of the Big Apple’s unfinished business. The Routes Not Taken sheds light on: \*the efforts to expand the Hudson Tubes into a full-fledged subway \*the Flushing line, and why it never made it past Flushing \*a platform under Brooklyn’s Nevins Street station unused for more than a century \*the 2nd Avenue line—long the symbol of dashed dreams—deferred countless times since the original plans were presented in 1929 Raskin reveals the personalities involved, explaining why Fiorello H. La Guardia couldn’t grasp the importance of subway lines and why Robert Moses found them old and boring. By focusing on unbuilt lines, he illustrates how the existing system is actually a Herculean feat of countless compromises. Filled with illustrations, this is an enduring contribution to the history of transportation and the history of New York City.

*The Routes Not Taken* Aug 29 2023 Robert A. Van Wyck, mayor of the greater city of New York, broke ground for the first subway line by City Hall on March 24, 1900. It took four years, six months, and twenty-three days to build the line from City Hall to West 145th Street in Harlem. Things rarely went that quickly ever again. The Routes Not Taken explores the often dramatic stories behind the unbuilt or unfinished subway lines, shedding light on a significant part of New York City’s history that has been almost completely ignored until now. Home to one of the world’s largest subway systems, New York City made constant efforts to expand its underground labyrinth, efforts that were often met with unexpected obstacles: financial shortfalls, clashing agendas of mayors and borough presidents, battles with local community groups, and much more. After discovering a copy of the 1929 subway expansion map, author Joseph Raskin began his own investigation into the city’s underbelly. Using research from libraries, historical societies, and transit agencies throughout the New York metropolitan area, Raskin provides a fascinating history of the Big Apple’s unfinished business that until now has been only tantalizing stories retold by public-transit experts. The Routes Not Taken sheds light on the tunnels and stations that were completed for lines that were never fulfilled: the efforts to expand the Hudson tubes into a fullfledged subway; the Flushing line, and why it never made it past Flushing; a platform underneath Brooklyn’s Nevins Street station that has remained

unused for more than a century; and the 2nd Avenue line—long the symbol of dashed dreams—deferred countless times since the original plans were presented in 1929. Raskin also reveals the figures and personalities involved, including why Fiorello LaGuardia could not grasp the importance of subway lines and why Robert Moses found them to be old and boring. By focusing on the unbuilt lines, Raskin illustrates how the existing subway system is actually a Herculean feat of countless political compromises. Filled with illustrations of the extravagant expansion plans, *The Routes Not Taken* provides an enduring contribution to the transportation history of New York City.

**Comparative Evaluation of Sludge Reduction Routes** Jul 28 2023 This project aims at the evaluation of eight various routes that potentially may allow wastewater treatment plants to produce less sludge (from 5% to 100%). It has been possible to define several routes that could be applied efficiently with knowledge of possible side-effects (risk management) and an estimation of associated costs (OPEX/CAPEX), which are quite comparable to those used in conventional sludge treatment and disposal.

**Routes of Remembrance** Oct 07 2021 Over the past fifteen years, visitors from the African diaspora have flocked to Cape Coast and Elmina, two towns in Ghana whose chief tourist attractions are the castles and dungeons where slaves were imprisoned before embarking for the New World. This desire to commemorate the Middle Passage contrasts sharply with the silence that normally cloaks the subject within Ghana. Why do Ghanaians suppress the history of enslavement? And why is this history expressed so differently on the other side of the Atlantic? *Routes of Remembrance* tackles these questions by analyzing the slave trade's absence from public versions of coastal Ghanaian family and community histories, its troubled presentation in the country's classrooms and nationalist narratives, and its elaboration by the transnational tourism industry. Bayo Holsey discovers that in the past, African involvement in the slave trade was used by Europeans to denigrate local residents, and this stigma continues to shape the way Ghanaians imagine their historical past. Today, however, due to international attention and the curiosity of young Ghanaians, the slave trade has at last entered the public sphere, transforming it from a stigmatizing history to one that holds the potential to contest global inequalities. Holsey's study will be crucial to anyone involved in the global debate over how the slave trade endures in history and in memory.
