This series (also known as the WHO Blue Books) is regarded as the gold standard for the diagnosis of tumours and comprises a unique synthesis of histopathological diagnosis with digital and molecular pathology. These authoritative and concise reference books provide indispensable international standards for anyone involved in the care of patients with cancer or in cancer research, underpinning individual patient treatment as well as research into all aspects of cancer causation, prevention, therapy, and education. This volume will be of particular interest to pathologists, oncologists, surgeons, and epidemiologists who manage or research soft tissue and bone tumours. Sections are included on all recognized neoplasms of the soft tissue and bone, as well as on genetic tumour syndromes affecting these sites. Since the previous edition, there have been changes based on recent molecular and genetic information, with impact on clinical practice. This is a system-based textbook which means that it deals with anatomy system-by-system (eg cardiovascular system, central nervous system). As well as the subject index, the textbook contains a regional index to make it relevant also to students following regional anatomy courses. Corresponding to the content in the text, this comprehensive workbook provides a complete look at the bones, muscles, veins, glands, nerves, lymph nodes, and more of the head and neck. Detailed, high-quality images and a wealth of interactive learning exercises help reinforce challenging dental anatomy content and ensure that you fully grasp these foundational building blocks of oral health care. Comprehensive dental anatomy coverage reinforces student knowledge of all the key structures in the head and neck. Labeling and vocabulary review exercises aid students with memorization and recall. Review questions correlated with chapter coverage help students prepare for course quizzes and tests, as well as certification exams. Case studies challenge students to apply their critical thinking skills to real-world patient scenarios. Forty removable flashcards focus on body systems of the head and neck and are ideal for on-the-go study. Punched and perforated pages make it easy for students to submit workbook exercises as course assignments. Offering a comprehensive, multidisciplinary approach to head and neck oncology, Cancer of the Head and Neck, Fifth Edition, delivers authoritative guidance to the entire head and neck cancer care team. Retaining an expert surgical focus that has made it a classic in the field, this edition incorporates new disease- and site-specific chapters as well as a greater emphasis on reconstruction and rehabilitation. Written and edited by globally renowned head and neck surgeons, it's an indispensable resource for practitioners, trainees, and other health care professionals who care for patients with head and neck cancer.
