How Buildings Learn May 06 2022 Buildings have often been studied whole in space, but never before have they been studied whole in time. How Buildings Learn is a masterful new synthesis that proposes that buildings adapt best when constantly refined and reshaped by their occupants, and that architects can mature from being artists of space to becoming artists of time. From the connected farmhouses of New England to I.M. Pei's Media Lab, from "satisficing" to "form follows funding," from the evolution of bungalows to the invention of Santa Fe Style, from Low Road military surplus buildings to a High Road English classic like Chatsworth—this is a far-ranging survey of unexplored essential territory. More than any other human artifacts, buildings improve with time—if they're allowed to. How Buildings Learn shows how to work with time rather than against it.

Dream Play Build Jul 28 2021 The room is dim, the chairs are in perfectly lined rows. The city planner puts up a color-coded diagram of the street improvement project, dreading the inevitable angry responses. Jana loves her community and is glad to be able to attend the evening meeting, and she has a lot of ideas for community change. But she has a hard time hearing, and can ’ t see the diagrams clearly.

She leaves early. It ' s time to imagine a different type of community engagement – one that inspires connection, creativity, and fun. People love their communities and want them to become safer, healthier, more prosperous places. But the standard approach to public meetings somehow makes everyone miserable. Conversations that should be inspiring can become shouting matches. So what would it look like to facilitate truly meaningful discussions between citizens and planners? What if they could be fun? For twenty years, James Rojas and John Kamp have been looking to art, creative expression, and storytelling to shake up the classic community meeting. In *Dream Play Build*, they share their insights into building common ground and inviting active participation among diverse groups. Their approach, “ Place It!, ” draws on three methods: the interactive model-building workshop, the pop-up, and site exploration using our senses. Using our hands to build and create is central to what makes us human, helping spark ideas without relying on words to communicate. Deceptively playful, this method is remarkably effective at teasing out community dreams and desires from hands-on activities. *Dream Play Build* offers wisdom distilled from workshops held around the world, and a deep dive into the transformational approach and results from the South Colton community in southern California. While much of the process was developed through in-person meetings, the book also translates the experience to online engagement--how to make people remember their connections beyond the computer screen. Inspirational and fun, *Dream Play Build* celebrates the value of engaging with the dreams we have for our communities. Readers will find themselves weaving these artful, playful lessons and methods into their own efforts for making change within the landscape around them.

Building a Church Oct 11 2022 Navigating the church construction process can be a daunting task for a seasoned professional and even more so for a first time project manager. In his book, Terry Harpool discusses many of the aspects of this process beginning with prayer. Prayer is an absolutely essential requirement in seeking God's will from the very start of the project to its completion. Paramount to the success of the construction process is the selection of a qualified project manager to oversee the construction. This is vital, along with selecting a group of church experts, to help provide the needed inputs for requirements and budget. The book also provides tips on how to select the most qualified architect and general contractor based on the specific needs of the church. This ensures the building is specifically designed to meet church requirements and that it can be built on time and on budget. Also in the book, there is a discussion of the bid letter contents. These include special instructions to the general contractor, which help outline the parameters of the project and also prevents confusion during the construction phase. The book discusses many of the pitfalls that can occur during the construction phase with valuable insight on how to avoid these pitfalls. Additionally, there is a discussion of the dreaded "change order" and how it can impact the project. The critical relationship of "time, quality, and money" is addressed in the book, providing insight of how these three elements are interrelated in church construction. And finally, the book emphasizes the importance of giving thanks to God for the successful completion and celebration of the new church building. With project

completion, the ultimate realization for the project manager is knowing that he has laid up treasure for his faithfulness in a job "well done."

The authors move beyond the current definition of sustainability in architecture, which tends to focus on energy-efficiency, to include guidance for architecture that promotes social cohesion, personal health, renewable energy sources, water and waste recycling systems, permaculture, energy conservation - and crucially, buildings in relation to their place. The authors offer a holistic approach to sustainable architecture and authoritative technical advice, on: * How to design and construct healthy buildings, through choosing suitable materials, healthy service systems, and designing a healthy and comfortable indoor climate, including solutions for avoiding problems with moisture, radon and noise as well as how to facilitate cleaning and maintenance. * How to design and construct buildings that use resources efficiently, where heating and cooling needs and electricity use is minimized and water-

saving technologies and garbage recycling technologies are used. *
How to 'close' organic waste, sewage, heat and energy cycles. For
example, how to design a sewage system that recycles nutrients. *
Includes a section on adaptation of buildings to local conditions,
looking at how a site must be studied with respect to nature, climate
and community structure as well as human activities. The result is a
