This book challenges amoral views of finance as the leading realm in which mammon - wealth and profit - is pursued with little overt regard for morality. The author details an enhanced ethical emphasis by leading Anglo-American professionals in the aftermath of the 2007-8 global financial crisis. Instead of merely stressing expert knowledge, professionals sought to overcome the alleged impossibility of

servicing "two masters" - mammon and God - by embracing religious finance, socio-economic inequality, sustainability and other overtly moral issues. Continuities in liberal values and ideas, however, limited the impact of this enhanced ethical emphasis to restoring the professional authority, as well as to more fundamentally reforming of Anglo-American finance following the most severe period of instability since the Great Depression. Providing a nuanced account of post-crisis change and continuity in a crucially important industry, Campbell-Verduyn advances a dynamic, process-based understanding of authority that will appeal to international political economists and sociologists alike. 1. Budget literacy is defined as 'the ability to read, decipher, and understand public budgets to enable and enhance meaningful citizen participation in the budget process'. It is comprised of two main parts - (i) a technical understanding of public budgets, including familiarity with government spending, tax rates and public debt and; (ii) the ability to engage in the budget process, comprising of practical knowledge on day-to-day issues, as well as an elementary understanding of the economic, social and political implications of budget policies, the stakeholders involved and when and how to provide inputs during the annual budget cycle. Given that no international standards or guidelines have been established for budget literacy education to date, this book seeks to address this gap by taking stock of illustrative initiatives promoting budget literacy for youth in selected countries. The underlying presumption is that when supply-side actors in the budget process -- governments -- simplify and disseminate budget information for

demand-side actors -- citizens -- this information will then be used by citizens to provide feedback on the budget. However, since citizens are often insufficiently informed about public budgets to constructively participate in budget processes one way to empower them and to remedy the problem of "budget illiteracy" is to provide budget-literacy education in schools to youth, helping them evolve into civic-minded adults with the essential knowledge needed for analyzing their government's fiscal policy objectives and measures, and the confidence and sense of social responsibility to participate in the oversight of public resources. This book elaborates on approaches, learning outcomes, pedagogical strategies and assessment approaches for budget literacy education, and presents lessons that are relevant for the development, improvement, or scaling up of budget literacy initiatives. Every bit of information is helpful in guiding you to reach your higher education goals. We enjoyed getting this magazine out to you, and we believe you'll enjoy reading every page. The theory and practice of management accounting should be seen within the context of varieties of global capitalism, to appreciate its role as a 'calculative technology of capitalism' which is practiced on factory floors, corporate boards, computer networks, spreadsheets, and so forth. This new textbook is the first to introduce the field from a rounded social science perspective. Strategizing Management Accounting offers a theoretical discussion on management accounting's strategic orientation by accommodating two interrelated lines of analyses, from historical and contemporary perspectives. The book illustrates how 'new management accounting' has evolved into the form in which it exists today in its neoliberal

context and how those new management accounting practices have become manifestos for the managers, as calculative technologies of decision making, performance management, control, corporate governance, as well as global governance, and development within various forms of organizations across the globe. Each chapter draws on Foucauldian analysis of biopolitics explaining how neoliberal market logic informs a set of strategies and mechanisms through which various social entities and discourses are made governable by considering them as biopolitical entities of global governance. Written by two recognized accounting experts, this book is vital reading for all students of management accounting and will also be a useful supplementary resource for those wanting to understand and research accounting's vital role in contemporary society.

As the centre of world economic development has shifted towards Asia over the last two decades, many Asian countries have witnessed rapid growth in economic and business operations. In light of these recent changes, accounting has played a significant role in assisting economic transition and advancement in Asian countries. However, although the general trend over recent decades towards convergence in financial reporting standards and practices has dramatically improved the comparability of accounting information, considerable variances remain in practices between countries. This Handbook therefore provides an up-to-date review of contemporary accountancy across Asia, illustrating how standards have been reshaped to accommodate the needs of economic and social trends. As well as providing an overview of standards in the larger Asian economies of China, India and Japan, contributions to the Handbook also include studies of countries such as Sri Lanka, Nepal, Cambodia and Mongolia. In particular, this Handbook analyses: financial accounting and reporting management accounting auditing and accounting professionalization governmental and public-sector accounting accounting

education accounting development in Asian emerging economies.
